Parallel Computing Architectures and APIs Vivek Kale, 2019-12-06 Parallel Computing Architectures and APIs IoT Big Data Stream Processing commences from the point high performance uniprocessors were becoming increasingly complex expensive and power hungry A basic trade off exists between the use of one or a small number of such complex processors at one extreme and a moderate to very large number of simpler processors at the other When combined with a high bandwidth interprocessor communication facility leads to significant simplification of the design process However two major roadblocks prevent the widespread adoption of such moderately to massively parallel architectures the interprocessor communication bottleneck and the difficulty and high cost of algorithm software development One of the most important reasons for studying parallel computing architectures is to learn how to extract the best performance from parallel systems Specifically you must understand its architectures so that you will be able to exploit those architectures during programming via the standardized APIs This book would be useful for analysts designers and developers of high throughput computing systems essential for big data stream processing emanating from IoT driven cyber physical systems CPS This pragmatic book Devolves uniprocessors in terms of a ladder of abstractions to ascertain say performance characteristics at a particular level of abstraction Explains limitations of uniprocessor high performance because of Moore s Law Introduces basics of processors networks and distributed systems Explains characteristics of parallel systems parallel computing models and parallel algorithms Explains the three primary categorical representatives of parallel computing architectures namely shared memory message passing and stream processing Introduces the three primary categorical representatives of parallel programming APIs namely OpenMP MPI and CUDA Provides an overview of Internet of Things IoT wireless sensor networks

WSN sensor data processing Big Data and stream processing Provides introduction to 5G communications Edge and Fog computing Parallel Computing Architectures and APIs IoT Big Data Stream Processing discusses stream processing that enables the gathering processing and analysis of high volume heterogeneous continuous Internet of Things IoT big data streams to extract insights and actionable results in real time Application domains requiring data stream management include military homeland security sensor networks financial applications network management web site performance tracking real time credit card fraud detection etc

Analysis of Algorithms Jeffrey J. McConnell, 2008 Data Structures Theory of Computation An Introduction to Data Structures and Algorithms J.A. Storer, 2012-12-06 Data structures and algorithms are presented at the college level in a highly accessible format that presents material with one page displays in a way that will appeal to both teachers and students The thirteen chapters cover Models of Computation Lists Induction and Recursion Trees Algorithm Design Hashing Heaps Balanced Trees Sets Over a Small Universe Graphs Strings Discrete Fourier Transform Parallel Computation Key features Complicated concepts are expressed clearly in a single page with minimal notation and without the clutter of the syntax of a particular programming language algorithms are presented with self explanatory pseudo code Chapters 1 4 focus on elementary concepts the exposition unfolding at a slower pace Sample exercises with solutions are provided Sections that may be skipped for an introductory course are starred Requires only some basic mathematics background and some computer programming experience Chapters 5 13 progress at a faster pace The material is suitable for undergraduates or first year graduates who need only review Chapters 1 4 This book may be used for a one semester introductory course based on Chapters 1 4 and portions of the chapters on algorithm design hashing and graph algorithms and for a one semester advanced course that starts at Chapter 5 A year long course may be based on the entire book Sorting often perceived as rather technical is not treated as a separate chapter but is used in many examples including bubble sort merge sort tree sort heap sort quick sort and several parallel algorithms Also lower bounds on sorting by comparisons are included with the presentation of heaps in the context of lower bounds for comparison based structures Chapter 13 on parallel models of computation is something of a mini book itself and a good way to end a course Although it is not clear what parallel
