Autoimmune Hepatitis Autoimmune Hepatitis:

Autoimmune Liver Diseases Hiromasa Ohira, 2014-08-21 *Autoimmune Liver Diseases* summarizes the recent high impact research and clinical findings obtained in Japan in the study and treatment of autoimmune liver diseases. Although these disorders are relatively rare, they are recognized as an important group of refractory liver diseases, the most common of which are autoimmune hepatitis (AIH) and primary biliary cirrhosis (PBC). The book therefore comprises two major sections: one dealing with AIH, the other with PBC. AIH in Japanese patients creates a unique disease population as its clinical features are different from those of Western patients, resulting from the different genetic background of the two patient populations. Also, mouse models of neonatal thymectomy, PD-1 knockout mice, clinical analyses of acute hepatitis-like manifestations, and research findings on IgG4-related autoimmune hepatitis have been reported in Japan and are included in this book. A disease susceptibility gene specific to Japanese PBC patients has also recently been discovered. Because of the relatively homogeneous population of Japan, analyses conducted with Japanese PBC patients have yielded findings that are highly relevant to the pathogenesis of the disease. Furthermore, new pathological staging criteria, anti-gp210 antibodies, and the basis they provide for improved accuracy of prognosis, treatment with bezafibrate, and the outcomes of living donor liver transplantation are also presented here. This volume therefore serves as a useful resource not only for hepatologists but also for researchers, clinical residents, and medical students both in Japan and in other countries. **Diagnosis and**

Management of Autoimmune Hepatitis Mark W. Russo, 2020-03-17 This text provides a concise yet comprehensive overview of autoimmune hepatitis (AIH). The book reviews diagnosis criteria for AIH, biochemical and histologic findings in typical and atypical cases, and treatment with first, second, and third line therapies. Furthermore, the book discusses management of AIH for specific patient populations, including pediatric patients, pregnant patients, and patients undergoing liver transplantation. Criteria for stopping therapy and risk of relapse, studies demonstrating the efficacy and safety of alternatives to corticosteroids, and diagnosis and treatment of overlap syndromes are also explored in the text. Written by experts in the field, *Diagnosis and Treatment of Autoimmune Hepatitis: A Clinical Guide* is a state-of-the-art resource for clinicians and practitioners who treat and manage patients with AIH. *Autoimmune Hepatitis* Gideon M. Hirschfield, E. Jenny Heathcote, 2011-12-02 With a focus on practical patient-related issues, *Autoimmune Hepatitis: A Guide for Practicing Clinicians* serves as a useful practical and much-needed resource for all those physicians presented with managing patients diagnosed with autoimmune hepatitis, both acutely and over the long term. It provides a basis for clinicians to understand the etiology of the disease as well as special circumstances where management dilemmas often arise. Emphasis is given to providing management advice of immediate use to clinicians, something not presently offered by other larger general texts. The chapters are written by those with an expertise and training in this field and include the most up-to-date information. The book will be of great value to Gastroenterologists, Hepatologists, and Internists at all levels who see patients presenting with

Autoimmune processes in the liver can cause severe damage and destruction leading to cirrhosis and liver failure The clinical spectrum of autoimmune liver disease is very wide and diagnostic difficulties often stand at the beginning of the patient's medical career While in autoimmune hepatitis immunosuppressive therapy has long been shown to be life saving therapeutic progress is small in primary biliary cirrhosis and questionable in primary sclerosing cholangitis New approaches to treatment will be needed in the future but require better understanding of the pathogenesis of the underlying disease process This book the proceedings of Falk Symposium 142 on Autoimmune Liver Disease held in Freiburg Germany on 12-13 October 2004 Part I of the Gastroenterology Week Freiburg describes possible mechanisms of pathogenesis discusses diagnostic criteria and takes up controversies concerning treatment options In view of the relatively frequent manifestation of autoimmune hepatitis in childhood in particular paediatric aspects of autoimmune liver disease and the role of liver transplantation are given prominence **Autoimmune Liver Disease** James Neuberger,Gideon M. Immunology and Liver M.P. Manns, G. Paumgartner, U. Leuschner, 2012-12-06 In 1992 the Falk Symposium No 70 dealt with the topic Immunology and Liver At that time basic mechanisms of immunology as well as immunopathogenetic mechanisms in viral and autoimmune liver diseases were discussed Now 7 years later the Falk Symposium No 114 held in Basel Switzerland October 20-21 1999 Part I of the Basel Liver Week 1999 focused on immunology in autoimmune liver diseases In the first section basic mechanisms of autoimmunity are presented including the relevance of superantigens and the role of apoptosis A further topic is the latest developments concerning animal models for autoimmune diseases Recently the International Autoimmune Hepatitis Group newly defined and reclassified the syndrome of autoimmune hepatitis Autoimmune hepatitis is now identified and studied in all parts of the world including Asia and South America A special variant of autoimmune hepatitis was identified as one organ manifestation of the autoimmune polyendocrine syndrome type 1 a genetic disease caused by mutations in a single transcription factor Drug and hepatitis virus induced immune mediated liver diseases may serve as models for nonhepatic immune mediated disorders DNA technology has increased our knowledge of the immunogenetic background of autoimmune liver diseases Among the cholestatic immune mediated liver diseases significant progress has been made concerning primary biliary cirrhosis in particular regarding the identification of

mitochondrial antigens and the characterisation of the immune reactions directed at them The involvement of infectious agents in PBC as well as the definition of overlap syndromes is a particular focus for basic and clinical research in this area Concerning the therapy of autoimmune liver diseases corticosteroids and azathioprin remain the state of the art for autoimmune hepatitis while bile acids have become well established in treatment of primary biliary cirrhosis as well as primary sclerosing cholangitis New drugs in the future will include topical steroids such as budesonide and new immunosuppressive agents like mofetil mycophenolate Liver transplantation is the treatment of choice for end stage liver diseases all autoimmune liver diseases are among the best candidates for liver transplantation Hopefully new therapeutic strategies based on the results obtained from experimental models will become everyday clinical practice in the next decade Therefore this symposium concludes with a discussion
