Atmospheric Modeling The Ima Volumes In Mathematics And Its Applications:

Atmospheric Modeling David P. Chock, Gregory R. Carmichael, 2002-07-31 This volume contains refereed papers submitted by international experts who participated in the Atmospheric Modeling workshop March 15-19 2000 at the Institute for Mathematics and Its Applications IMA at the University of Minnesota. The papers cover a wide range of topics presented in the workshop. In particular, mathematical topics include a performance comparison of operator splitting and non-splitting methods, time-stepping methods to preserve positivity, and consideration of multiple timescale issues in the modeling of atmospheric chemistry; a fully 3D adaptive grid method; impact of grid resolution on model predictions; testing the robustness of different flow fields; modeling and numerical methods in four-dimensional variational data assimilation and parallel computing. Modeling topics include the development of an efficient self-contained global circulation chemistry transport model and its applications; the development of a modal aerosol model and the modeling of the emissions and chemistry of monoterpenes that lead to the formation of secondary organic aerosols. The volume provides an excellent cross-section of current research activities in atmospheric modeling. *Advances in Air Pollution Modeling for Environmental Security* István Faragó, Krassimir Georgiev, Ágnes Havasi, 2005-07-14 The protection of our environment is one of the major problems in society. More and more important physical and chemical mechanisms are to be added to the air pollution models. Moreover, new reliable and robust control strategies for keeping the pollution caused by harmful compounds under certain safe levels have to be developed and used in a routine way. Well-based and correctly analyzed large mathematical models can successfully be used to solve this task. The use of such models leads to the treatment of huge computational tasks. The efficient solution of such problems requires combined research from specialists working in different fields. The aim of the NATO Advanced Research Workshop NATO ARW entitled *Advances in Air Pollution Modeling for Environmental Security* was to invite specialists from all areas related to large-scale air pollution modeling and to exchange information and plans for future actions towards improving the reliability and the scope of application of the existing air pollution models and tools. This ARW was planned to be an interdisciplinary event which provided a forum for discussions between physicists, meteorologists, chemists, computer scientists, and specialists in numerical analysis about different ways for improving the performance and the quality of the results of different air pollution models. *Large-Scale Scientific Computing* Ivan Lirkov, Svetozar Margenov, Jerzy Wasniewski, 2010-04-23 This book constitutes the thoroughly refereed post-conference proceedings of the 7th International Conference on Large Scale Scientific Computations LSSC 2009 held in Sozopol, Bulgaria, in June 2009. The 93 revised full papers presented together with 5 plenary and invited papers were carefully reviewed and selected from numerous submissions for inclusion in the book. The papers are organized in topical sections on multilevel and multiscale preconditioning methods; multilevel and multiscale methods for industrial applications; environmental modeling; control and uncertain systems; application of metaheuristics to large-scale problems; Monte Carlo methods; applications.
