Analysis And Geometry On Complex Homogeneous Domains Progress In Mathematics:

Analysis and Geometry on Complex Homogeneous Domains Jacques Faraut, Soji Kaneyuki, Adam Koranyi, Qi-keng Lu, Guy Roos, 2012-12-06 A number of important topics in complex analysis and geometry are covered in this excellent introductory text. Written by experts in the subject, each chapter unfolds from the basics to the more complex. The exposition is rapid paced and efficient without compromising proofs and examples that enable the reader to grasp the essentials. The most basic type of domain examined is the bounded symmetric domain originally described and classified by Cartan and Harish Chandra. Two of the five parts of the text deal with these domains: one introduces the subject through the theory of semisimple Lie algebras (Koranyi) and the other through Jordan algebras and triple systems (Roos). Larger classes of domains and spaces are furnished by the pseudo Hermitian symmetric spaces and related R-spaces. These classes are covered via a study of their geometry and a presentation and classification of their Lie algebraic theory (Kaneyuki). In the fourth part of the book, the heat kernels of the symmetric spaces belonging to the classical Lie groups are determined (Lu). Explicit computations are made for each case, giving precise results and complementing the more abstract and general methods presented. Also explored are recent developments in the field, in particular the study of complex semigroups which generalize complex tube domains and function spaces on them (Faraut). This volume will be useful as a graduate text for students of Lie group theory with connections to complex analysis or as a self-study resource for newcomers to the field. Readers will reach the frontiers of the subject in a considerably shorter time than with existing texts.

Symmetries in Complex Analysis Bruce Gilligan, Guy Roos, 2008 The theme of this volume concerns interactions between group actions and problems in complex analysis. The first four articles deal with such topics as representation kernels in representation theory, complex automorphisms and holomorphic equivalence of domains and geometric description of exceptional symmetric domains. The last article is devoted to Seiberg-Witten equations and Taubes' correspondence on symplectic 4-manifolds.

BOOK JACKET

Combinatorial Algebraic Geometry Aldo Conca, Sandra Di Rocco, Jan Draisma, June Huh, Bernd Sturmfels, Filippo Viviani, 2014-05-15 Combinatorics and Algebraic Geometry have enjoyed a fruitful interplay since the nineteenth century. Classical interactions include invariant theory, theta functions and enumerative geometry. The aim of this volume is to introduce recent developments in combinatorial algebraic geometry and to approach algebraic geometry with a view towards applications such as tensor calculus and algebraic statistics. A common theme is the study of algebraic varieties endowed with a rich combinatorial structure. Relevant techniques include polyhedral geometry, free resolutions, multilinear algebra, projective duality and compactifications.

Advances in Real and Complex Analysis with Applications Michael Ruzhansky, Yeol Je Cho, Praveen Agarwal, Iván Area, 2017-10-03 This book discusses a variety of topics in mathematics and engineering as well as their applications, clearly explaining the mathematical concepts in the simplest possible way and illustrating them with a number of solved examples. The topics include real and complex analysis, special functions and analytic number theory, q -series.
