What is the purpose of the cooling system? - correct answers To maintain safe engine operating temperature.

What causes rapid wear of engine parts? What causes slugging of the oil? - correct answers Excessive high and low temperatures cause parts to fail. Low temperatures will cause slugging of the oil, and hence component failure.

How does the radiator get rid of heat? - correct answers Coolant is pumped through the core and air passes over the fins, which increase the surface area of the core, to dissipate heat to the atmosphere.

What else does the radiator help to cool? - correct answers Some radiators also help cool the transmission fluid.

What component in the radiator cap controls pressure? - correct answers The pressure valve in the radiator cap.

How much will the radiator cap raise the boiling point of coolant? - correct answers The boiling point will increase approximately 3 degrees Fahrenheit for each pound of pressure.

What does the coolant do when it gets hot? Cold? - correct answers The coolant expands when it gets hot and contracts when it gets low.

When coolant expands, where does it go? - correct answers When the coolant expands it goes into the overflow tank (expansion tank).

Describe a down-flow radiator and a cross-flow radiator. - correct answers In a down-flow radiator the hot coolant leaves the engine into the upper tank in the radiator and flows through the core downwards to the lower tank. In a cross-flow radiator the hot coolant leaves the engine into a tank on either side of the radiator and flows across the core into a tank on the opposite side.
