Eriksson, Robert A. Blanchette, Paul Ander, 2012-12-06 The oil crisis during the 1970s turned interest towards the utilization of renewable resources and towards lignocellulosics in particular The 1970s were also the cradle period of biotechnology and the years when biotechnical utilization of lignocellulosic waste from agriculture and forestry gained priority This was a logical conclusion since one of nature's most important biological reactions is the conversion of wood and other lignocellulosic materials to carbon dioxide water and humic substances However while biotechnology in other areas like medicine and pharmacology concerned production of expensive products on a small scale biotechnical utilization and conversion of lignocellulosics meant production of inexpensive products on a large scale Biotechnical utilization of lignocellulosic materials is therefore a very difficult task and the commercial utilization of this technology has not progressed as rapidly as one would have desired One reason for this was the lack of basic knowledge of enzyme mechanisms involved in the degradation and conversion of wood other lignocellulosics and their individual components There are also risks associated with initiating a technical development before a stable platform of knowledge is available Several of the projects started with enthusiasm have therefore suffered some loss of interest Also contributing to this failing interest is the fact that the oil crisis at the time was not a real one At present nobody predicts a rapid exhaustion of the oil resources and fuel production from lignocellulosics is no longer a high priority Molecular and Cellular Methods in Developmental Toxicology George P. Daston, 2019-04-30 This new manual provides a convenient source of experimental procedures including the most modern and frequently used molecular and cellular techniques Experimental protocols have been carefully selected by developmental toxicologists for developmental

toxicologists The most important new trends such as evaluation of the safety of therapeutic antisense oligonucleotides studies of the role of cell death in abnormal development and the identification of sparingly expressed developmental control genes are featured This is the perfect manual for scientists trained in classical developmental toxicology who want to add molecular and cellular methods to their research

Plant Microtechniques and Protocols Edward Chee Tak Yeung, Claudio Stasolla, Michael John Sumner, Bing Quan Huang, 2015-09-19 A proper understanding of the structural organization of the plant body is essential to any study in plant biology Experimental studies in vivo and in situ will lead to structural physiological and cellular changes of the experimental material To study macroscopic and microscopic changes different histological methods and microtechniques can be used as they provide valuable information of the experimental system In addition the observed structural changes allow investigators to set hypothesis for further studies based on one's own observation Thus proper selection and utilization of microtechniques are a must for the success of a research program At present an up to date collection of protocols are not readily available in the literature The latest work in plant microtechniques was published in 1999 by Ruzin but many others are no longer in print e g Jensen 1964 O'Brien and McCully 1981 Furthermore a majority of published works focus on techniques related to general processing and staining procedures A comprehensive treatment that encompasses broader applications of microtechniques to other disciplines is lacking e g archeology wood science etc There is a need to create a comprehensive volume of botanical methods and protocols which includes traditional and novel techniques that can be used by researchers in plant science and investigators in other disciplines that require plant microtechniques in their research and teaching This book covers a wide variety of applications and brings them up to date to make them understandable and relevant especially to students using the methods for the first time It is our intention to create a useful reference for plant histology and related methods that will serve as a foundation for plant scholars researchers and teachers in the plant sciences
