BIOMES

Take a closer look at the images above. Each is home to a variety of plants and animals, but no two are the same. Although they're all capable to life, there are quite a lot of differences too. Many of these differences are **abiotic**, or have to do with the non-living parts of the environment. Abiotic factors include temperature, the amount of oxygen in the air or water, and the kind of soil present.

infer, or make your best guess, about some of the abiotic factors in each of the images.

Location	Temperature	Amount of rainfall
A		
B		
C		

Specifying these locations are all home to many trees, or living, factors as well. What kinds of species do you think live in each of these places? Find five in plants, animals, birds, fish, insects, and even microscopic life like bacteria!

BIOMES

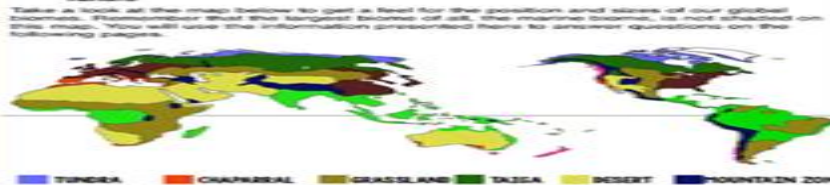

Chaparral

Tundra

Lastly, the **chapparral** biome is a coastal biome with hot, dry summers and mild winters. It has mostly shrubs with a few short trees. Deer, birds, and rabbits live in the chapparral.

Tundra When we think of deserts, we usually think of a hot and dry place, but did you know that deserts can be cold too? The **Tundra** in Alaska is the largest cold desert, but there is so much snow (and) that it's still considered a desert. Both plants and animals must adapt to dry life in the desert. Many develop unique ways of surviving such as water storage.

Answer the following questions using the world map.

1. Which land biome is the largest?
2. Which continents have this biome on them?
3. Which continent has the most different biomes?
4. What biomes does it have?
5. Name 3 biomes present in Africa.
6. Name 3 continents with mountain forests.

extremely nutrient rich soil. Here you'll find a variety of plants and animals. Due to their dry and hot climate, plants in both savanna and grasslands are adapted to survive relatively common fires.

Desert When we think of deserts, we usually think of a hot and dry place, but did you know that deserts can be cold too? The **Desert** in Alaska is the largest cold desert, but there is so much snow (and) that it's still considered a desert. Both plants and animals must adapt to dry life in the desert. Many develop unique ways of surviving such as water storage or the ability to remain dormant (similar to hibernation) for a long time.

Forest There are several different kinds of forest biomes, including: The **rainforest** is most likely the most famous forest. This lush forest is home to a vast number of plants and animals. Rainforests are home to a wide variety of plants and animals. Here you can find parrots, sloths, and many other animals.

The **temperate forest** is common in the US, Canada, Europe, and Asia. Here you'll find deciduous trees that lose their leaves in the winter. In fact, that's what this biome is famous for: it's a unique forest. The **coniferous forest** is found in the northern hemisphere and the winters are cold. In these forests you'll find bears, deer, and many other animals. The **alpine** is a cold forest with cone-bearing, coniferous trees. These forests are found in the mountains of North America, Northern Canada and Russia. The days are long in the summer and short in the winter due to the altitude of these forests, so the climate is very different.

BIOMES

Earth is an amazing planet. It has many different environments that make perfect homes for millions of species. The largest major habitats that exist worldwide are known as **biomes**. Most likely, you're familiar with many of these: desert, rainforest, grassland, etc. Each biome is unique and has its own set of characteristics that make it different from the others. One of the most important factors in maintaining biodiversity, or the amazing variety of life, that makes our Earth so abundant in species and resources.

How many biomes are there? Do all water environments constitute a single aquatic biome? Are all fire-filled ecosystems considered a forest biome? The number of biomes you could simply depend on how specific you'd like to be. Let's take a look at some of the largest biomes, and the abiotic and biotic factors that define them.

Marine

Freshwater

Savanna

For fish, birds, frogs, whales, and other aquatic species. **Aquatic Biomes** Since water covers over 70% of the Earth, the largest biomes are the aquatic biomes. Marine biomes include coral reefs and estuaries, but the two major ones are the marine and freshwater biomes. The **marine** biome, made up of the world's oceans, is so big it's usually divided into smaller biomes. Estuaries, or the areas where the ocean meets the land, are actually a times larger than all of Earth's other biomes combined. The movement of water in the marine biome creates ocean currents which play a major role in creating weather.

Smaller **freshwater** biomes consist of lakes, ponds, and rivers. These are often just like the marine biomes because they do not contain salt. Freshwater biomes are especially important to us humans as they provide the water that we use to drink. All aquatic biomes provide homes for diverse plant and animal life. The largest and most diverse of these biomes are the **coral reefs**, which are found in the tropics. **Grassland** Grassland biomes live up to their name! They're made up of open and very few trees. The two major grassland biomes are the **savanna** and **temperate grassland**.

The **savanna** is a biome that covers half of Africa and large parts of Australia. These areas have a 6-8 month wet season in the summer and a 6-8 month dry season in the winter. Elephants, giraffes, and many other animals live in the savanna. The **temperate grasslands**, on the other hand, make up the plains of middle America.

BIOMES

Answer the following questions using the world map.

1. What is a biome?
2. Is weather a biotic factor or an abiotic factor? How do you know?

could find in a marine ecosystem. **Marine and freshwater ecosystems.** The marine biome is the largest of all biomes. It covers about 70% of the Earth's surface. It is home to a vast number of plants and animals. The freshwater biome is the second largest. It covers about 2.5% of the Earth's surface. It is home to a variety of plants and animals.

at **adapt** (or change) to survive. For example, polar bears have adapted to survive in the cold environment. What animals need to survive in the desert?

the biome including the plants, animals, and landforms.
