Analysing Architecture ,2009 ***Twenty-Five Buildings Every Architect Should Understand*** Simon

Unwin, 2014-11-17 *Twenty Five Buildings Every Architect Should Understand* is an essential companion to Simon Unwin's *Analysing Architecture* and part of the trilogy which also includes his *Exercises in Architecture* Learning to Think as an

Architect Together the three books offer an introduction to the workings of architecture providing for the three aspects of learning theory examples and practice Twenty Five Buildings focusses on analysing examples using the methodology offered by Analysing Architecture which operates primarily through the medium of drawing In this second edition five further buildings have been added to the original twenty from an even wider geographical area which now includes the USA France Italy Mexico Switzerland Spain Finland Germany Australia Norway Sweden India and Japan The underlying theme of Twenty Five Buildings Every Architect Should Understand is the relationship of architecture to the human being how it frames our lives and orchestrates our experiences how it can help us make sense of the world and contribute to our senses of identity and place Exploring these dimensions through a wide range of case studies that illustrate the rich diversity of twentieth and twenty first century architecture this book is essential reading for every architect

Exercises in Architecture Simon Unwin, 2013-06-17 Architecture is a doing word You can learn a great deal about the workings of architecture through analysing examples but a fuller understanding of its powers and potential comes through practice by trying to do it This book offers student architects a series of exercises that will develop their capacity for doing architecture Exercises in Architecture builds on and supplements the methodology for architectural analysis presented in the author's previous book Analysing Architecture third edition Routledge 2009 and demonstrated in his Twenty Buildings Every Architect Should Understand Routledge 2010 The three books taken together deal with the three aspects of learning description analysis of examples and practice The book offers twelve exercises each divided into a short series of tasks aimed at developing a particular theme or area of architectural capacity The exercises deal with themes such as place making learning through drawing framing light uses of geometry stage setting eliciting emotional responses the genetics of detail and so forth

Curve Simon Unwin, 2019-04-03 Each of these Analysing Architecture Notebooks is devoted to a particular theme in understanding the rich and varied workings of architecture They can be thought of as addenda to the foundation volume Analysing Architecture which first appeared in 1997 and has subsequently been enlarged in three further editions Examining these extra themes as a series of Notebooks rather than as additional chapters in future editions allows greater space for more detailed exploration of a wider variety of examples whilst avoiding the risk of the original book becoming unwieldy Curve is a divisive issue in architecture Some see curves as expensive and decadent others as an expression of transcendence a way that the human mind can express its freedom from quotidian constraints Yet others use curves to emulate some of the most beautiful forms in nature This Notebook considers the various authorities to which architects look for the generation of their curves It also considers the aspirations curves manifest in architectural form

Metaphor Simon Unwin, 2019-03-28 Each of these Analysing Architecture Notebooks is devoted to a particular theme in understanding the rich and varied workings of architecture They can be thought of as addenda to the foundation volume Analysing Architecture which first appeared in 1997 and has subsequently been enlarged in three further editions Examining these extra themes as a series of Notebooks

rather than as additional chapters in future editions allows greater space for more detailed exploration of a wider variety of examples whilst avoiding the risk of the original book becoming unwieldy Metaphor is the most powerful component of the poetry of architecture It has been a significant factor in architecture since the earliest periods of human history when people were finding ways to give order and meaning to the world in which we live It is arguable that architecture began with the realisation of metaphor in physical form and that subsequent movements from Greek to Gothic Renaissance to Modern Victorian to Vernacular have all been driven by the emergence or rediscovery of different metaphors by which architecture might be generated
