C. Sheppard, Simon K. Davy, Graham M. Pilling, 2009-06-25 Coral reefs represent the most spectacular and diverse marine ecosystem on the planet as well as a critical source of income for millions of people However the combined effects of human activity have led to a rapid decline in the health of reefs worldwide with many now facing complete destruction This timely book provides an integrated overview of the function physiology ecology and behaviour of coral reef organisms Each chapter is enriched with a selection of boxes on specific aspects written by internationally recognised experts As with other books in the Biology of Habitats Series the emphasis in this book is on the organisms that dominate this marine environment although pollution conservation climate change and experimental aspects are also included Indeed particular emphasis is placed on

conservation and management due to the habitat's critically endangered status. A global range of examples is employed which gives the book international relevance. This accessible text is intended for students, naturalists and professionals and assumes no previous knowledge of coral reef biology. It is particularly suitable for both senior undergraduate and graduate students in departments of biology, geography and environmental science taking courses in coral reef ecology, marine biology, oceanography and conservation biology as well as the many professional ecologists and conservation biologists requiring a concise overview of the topic. It will also be of relevance and use to reef managers, recreational divers and amateur naturalists.

Tracking Rural Change Francesca Merlan, David Raftery, 2009-04-01 A key intensifying change affecting rural areas in the last few decades has been a decline in the proportion of national populations whose principal livelihood is farming. The corresponding redistribution of population has typically resulted in a net population loss to rural areas and diversification of rural activity. The corporatization and technological modification of food production has prompted new policy challenges and has bound rural and urban populations together in new relationships articulated in moral discourses of custodianship, food safety and sustainability. Contributors to this volume came together in the attempt to stimulate collective insight into trends of rural change in Australia, New Zealand and Europe. The first two countries have been characterised by avowedly neoliberal rural policy with considerable departures from it in practice. Europe, on the other hand, by a mix of policy measures which attempt to integrate land management and sustainability, diversification and maintenance of a competitive farming sector within an overarching policy framework more overtly though only partially oriented towards sustaining rural society. Aiming to build on research relating to the character of rural transitions, this volume offers substantive and critical contributions to the understanding of the sources of unpredictability, instability and continuity that underpin rural transition. The papers explore changes and continuities in policy, the governance of rural spaces, technological developments relating to rural areas and populations and social forms of subjectivation and participation in increasingly diverse rural settings. **Eucalypt**

Ecology Jann Elizabeth Williams, John Woinarski, 1997-11-13 The dominant trees of Australia, eucalypts, make up a remarkable genus. This authoritative volume provides current reviews by active researchers of many disciplines including evolutionary history, genetics, distribution and modelling the relationship of eucalypts to fire and nutrients, ecophysiology, pollination and reproductive ecology, interactions between eucalypts and other co-existing biota including fungi, invertebrates and vertebrates and conservation and management. Together these reviews shed light on the reasons for the great success of eucalypts in Australian environments and provide a comprehensive summary for comparison with the ecology of major woody plant genera in other continents. This volume is of particular relevance to Australian ecologists but also provides a stimulating perspective to students of vegetation ecology in all continents. *Fisheries Management* Tim McClanahan, Juan Carlos Castilla, 2008-04-15 The world's stocks of wild fish continue to decline, making the task of finding innovative, sustainable and socially acceptable methods of fisheries management more important than ever.
