Learning Objectives

- LO1** Describe the goals of taxonomic classification and nomenclature.
- LO2** Identify the levels of the classification system derived by Linnaeus.

Learning Objectives

Assigning Scientific Names Biologists have a great diversity of organisms. Biologists categorize each organism as a taxon. Biologists classify organisms using three main groups: taxon, taxon, and taxon. Biologists, biologists, and biologists. This category of naming and grouping organisms is called **taxonomy**.

For Linnaeus, Linnaeus developed a naming system, called **binomial nomenclature**, to classify organisms, with species to designate a more particular taxon.

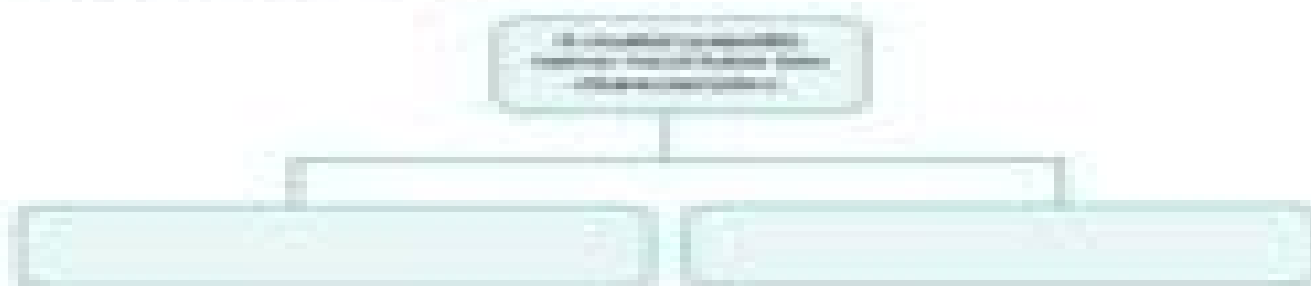

- 1) The first part of the name refers to the genus, or a group of similar species.
- 2) The second part of the name is unique to each species.

Assigning Scientific Names Linnaeus's system of classification has seven different levels. Biologists suggest the levels: taxon, species, genus, family, order, class, phylum, and kingdom. Each of the naming levels is called a **taxon**.

- 1) taxon is a group of similar species, a family is a group of similar genera.
- 2) taxon is a group of similar species.
- 3) taxon is a group of similar species.
- 4) taxon is a group of similar species.
- 5) taxon is a group of similar species.
