Autoantibodies in Neurological Diseases Angela Vincent, Gianvito Martino, 2001-09-01 Immune mediated neurological disorders present an increasing challenge to neurologists Recent advances have identified new antibodies new effector mechanisms and new diagnostic tests these have greatly enhanced our understanding of disease aetiology and opened up therapeutic opportunities but a critical understanding of this fast developing field is not easy to find This volume was conceived following a very successful course on neuroimmunology in Bergamo in 2000 and was written mainly by clinicians who are active in the laboratory It will help to keep practising neurologists and neuroimmunologists abreast of the most recent developments and to assess new information more critically Angela Vincent and Gianvito Martino should be congratulated on masterminding this timely and practical text July 2001 J Newsom Davis Professor Emeritus University of Oxford Table of Contents Introduction Approaches to Understanding Immune Mediated Neurological Disorders Measuring and Evaluating Autoantibodies to Neuronal Antigens G MARTINO A VINCENT **Neurology** Robin Howard, Dimitri Kullmann, David Werring, Michael Zandi, 2024-03-11 neurology A fully updated and authoritative neurology resource The Queen Square Textbook has established itself as a favourite companion to clinical neurosciences training and teaching around the world whilst retaining its role as an invaluable reference guide for physicians and other healthcare professionals working in neurology general medicine and related specialties The book continues to reflect the core values essential to the practice of clinical neurology in the 21st century The third edition has been extensively revised and updated to take account of the rapid pace of progress in the neurosciences and patient care Contemporary neurology has been changed by the COVID 19 pandemic the climate emergency and the growing inequalities in healthcare resources The new edition has been extensively revised to reflect these challenges and affords a greater emphasis on management and rehabilitation whilst continuing to reflect the coherence of a text produced from a single closely knit centre of excellence Highlights of the new edition include An updated approach to clinical examination decision making and diagnosis New developments in neuroimmunology pathology and genetics Neuropalliative care Ethical and legal issues in clinical neurology The latest developments in the understanding and management of stroke movement disorders epilepsy cognitive impairment multiple sclerosis infections myelopathy anterior horn cell disease disorders of nerve and muscle neuro oncology neurological disorders of hearing balance and vision and the neurological care of critical illness sleep neuropsychiatry pain autonomic and urological disorders An emphasis on treatment and rehabilitation of the person with a neurological disease The new edition marks a significant transition to reflect contemporary neurological practice during uncertain times It mirrors the enormous changes in investigation diagnosis and treatment that have occurred in recent years whilst maintaining the underlying principle that we do not treat diagnoses but rather we care for people affected by neurological disease **Autoimmunity and the Brain: Paraneoplastic Neurological Injury and Beyond** John Greenlee, Stacey L. treatment Moreover identifying the diverse biomarkers could further help to achieve the ultimate goal of personalized medicine

Selected Topics in Myasthenia Gravis Isam Jaber Al-Zwaini,Ali AL-Mayahi,2019-06-12 Myasthenia gravis is a rare potentially fatal chronic autoimmune disorder Circulating autoantibodies directed against components of the neuromuscular junction of skeletal muscles most commonly nicotinic acetylcholine receptor and associated protein in the postsynaptic membrane block neuromuscular transmission resulting in muscle weakness This muscle weakness typically worsens with continued activity improves on rest and is of variable severity ranging from mild ocular muscle weakness to severe generalized muscle weakness involving the

respiratory muscle with impending respiratory failure The worldwide prevalence of myasthenia gravis is 100 200 per million population affecting more than 700 000 people all over the world The prevalence rate has increased since the 1950s due to improved diagnostic precision and decreased mortality rate

Gene Therapy for the Central and Peripheral Nervous System
Andrew P. Tosolini, George M. Smith, 2018-05-10

Gene therapy is at the forefront of current techniques that aim to re-establish functional connectivity after an insult to the brain spinal cord or peripheral nerves Gene therapy makes the most of the existing cellular machinery and anatomical networks to facilitate molecular changes in DNA RNA and proteins aiming to repair these disrupted connections For instance gene therapy is currently being used to target genes in conditions including spinal cord injury amyotrophic lateral sclerosis spinal muscular atrophy stroke and multiple sclerosis amongst others The various delivery routes include viral vectors genetically modified cellular implants naked DNA RNA liposomes Cre Lox recombination optogenetics and nanoparticles In particular gene therapy aims to restore function by augmenting the expression of neuroprotective axonal growth promoting neurotrophic factors e g BDNF CNTF NGF and GDNF etc Furthermore the downstream intracellular signalling pathways after receptor activation can also be targeted e g mTor MAPK etc On the other hand gene therapy can also be used to downregulate and or remove faulty mutated genes such as those contributing to disease progression or that inhibit axonal regeneration e g SOD 1 TDP 43 Nogo A MAG OmGP etc Depending on the methodology these genes for instance can be silenced removed or replaced to alleviate the underlying pathology As such gene therapy can transform a largely toxic and inhibitory milieu surrounding a neuronal axonal insult into a growth permissive environment that will ultimately aid neuronal survival and functional regeneration Moreover gene therapy has the capacity to target non neuronal cells and can be even used for neuroanatomical tract tracing Ultimately the principal outcome of gene therapy is to functionally restore damaged neuronal and or axonal connections irrespective of the system it is being introduced in to This Research Topic is devoted to work using gene therapy for the both the central and or peripheral nervous system
