Architecture Of The Well Tempered Environment:

Architecture of the Well-Tempered Environment Reyner Banham, 2022-07-26 Reyner Banham was a pioneer in arguing that technology human needs and environmental concerns must be considered an integral part of architecture No historian before him had so systematically explored the impact of environmental engineering on the design of buildings and on the minds of architects In this revision of his classic work Banham has added considerable new material on the use of energy particularly solar energy in human environments Included in the new material are discussions of Indian pueblos and solar architecture the Centre Pompidou and other high tech buildings and the environmental wisdom of many current architectural vernaculars *Architecture of the Well-tempered Environment (selections)* Reyner Banham, 1973 *The Environmental Imagination* Dean Hawkes, 2008 This volume presents a chronologically ordered and detailed account of the developing relationship between technics and poetics in environmental design in architecture through a consideration of the work of major names in the field

The Soundscape of Modernity Emily Thompson, 2004-09-17 A vibrant history of acoustical technology and aural culture in early twentieth century America In this history of aural culture in early twentieth century America Emily Thompson charts dramatic transformations in what people heard and how they listened What they heard was a new kind of sound that was the product of modern technology They listened as newly critical consumers of aural commodities By examining the technologies that produced this sound as well as the culture that enthusiastically consumed it Thompson recovers a lost dimension of the Machine Age and deepens our understanding of the experience of change that characterized the era Reverberation equations sound meters microphones and acoustical tiles were deployed in places as varied as Boston's Symphony Hall New York's office skyscrapers and the soundstages of Hollywood The control provided by these technologies however was applied in ways that denied the particularity of place and the diverse spaces of modern America began to sound alike as a universal new sound predominated Although this sound clear direct efficient and nonreverberant had little to say about the physical spaces in which it was produced it speaks volumes about the culture that created it By listening to it Thompson constructs a compelling new account of the experience of modernity in America

Building Types and Built Forms Philip Steadman, 2014-02-28 *Building Types and Built Forms* weaves two books together in alternating chapters one about the history of building types the other about their geometry The first book follows the histories of some common types of building houses hospitals schools offices and prisons Examples are drawn from the 19th and early 20th centuries in France America and Britain with the central focus on London They include the pavilion hospitals associated with the name of Florence Nightingale English Board and Modernist schools of the 1920s and 30s tall office buildings in Chicago and New York Jeremy Bentham's Panopticon penitentiary and radial prisons on the model of Cherry Hill and Pentonville The second book takes these histories and uses them to explore how the forms of these buildings are constrained by some of the basic functions of architecture to provide daylight and ventilation to the interior to provide

access to all rooms or to allow occupants to see from one part of a building to another A new way of thinking about these worlds of geometrical possibility is introduced in which the forms of many buildings can be catalogued and laid out systematically in morphospaces or theoretical spaces of forms As building types change over time they come to occupy different positions within the worlds of possible forms Building Types and Built Forms is filled with over 400 illustrations many drawn especially for the book It offers a new theoretical approach combined with a series of historical accounts of building types some well known some less familiar It should appeal to academics practitioners historians and students of architecture

Reyner Banham Revisited Richard J. Williams, 2021-06-10 Reyner Banham 1922-88 was a prolific iconoclastic critic of modern architecture cities and mass culture in Britain and the United States and his provocative writings are inescapable in these areas His 1971 book on Los Angeles was groundbreaking in what it told Californians about their own metropolis and architects about what cities might be if freed from tradition Banham's obsession with technology and his talent for thinking the unthinkable mean his work still resonates now more than thirty years after his death This book explores the full breadth of his career and his legacy dealing not only with his major books but a wide range of his journalism and media outputs as well as the singular character of Banham himself

Changing Representations of Nature and the City Gabriel N. Gee, Alison Vogelaar, 2018-07-04 The turn of the 1960s-70s characterized by the rapid acceleration of globalization prompted a radical transformation in the perception of urban and natural environments The urban revolution and related prospect of the total urbanisation of the planet in concert with rapid population growth and resource exploitation instigated a surge in environmental awareness and activism One implication of this moment is a growing recognition of the integration and interconnection of natural and urban entities The present collection is an interdisciplinary inquiry into the changing modes of representation of nature in the city beginning from the turn of the 1960s-70s Bringing together a number of different disciplinary approaches including architectural studies and aesthetics heritage studies and economics environmental science and communication the collection reflects upon the changing perception of socio-natures in the context of increasing urban expansion and global interconnectedness as they were manifest in specific representations Using case studies from around the globe the collection offers a historical and theoretical understanding of a paradigmatic shift whose material and symbolic legacies are still accompanying us in the early 21st century

Bracket 3 Lola Sheppard, 2022-03-18 Bracket at Extremes includes critical articles and unpublished design projects that investigate architecture infrastructure and technology as they operate in conditions of imbalance negotiate tipping points and test limit states We are conditioned as designers of the built environment towards the organization of people programs and movement Indeed the history of modern urbanism architecture and building science has been predicated on an anti-entropic notion of programmatic and social order But are there scenarios in which a state of extremity or imbalance is productive Bracket at Extremes seeks to understand what new spatial orders emerge in this liminal space How might it be leveraged as an

opportunity for invention What are the limits of wilderness and control of the natural and artificial the real and the virtual What new landscapes networks and urban models might emerge in the wake of destabilized economic social and environmental conditions **Kinetic Architecture** Charles Linn, The Images Publishing Group, 2014-01-17 A shift in the architecture industry's focus in the last 20 years toward ecological concerns long term value and user comfort has coincided with significant new developments in digital controls actuators shading typologies building physics simulation capability and material performance This collision has afforded architects an expanded set of opportunities to create architecture that can respond directly to environmental conditions resulting in innovative facade designs that quickly become landmarks for their cities Authors Russell Fortmeyer and Charles Linn trace the historical development of active facades in modern architecture and reveal how contemporary architects and consultants design and test these systems **Reyner Banham and the Paradoxes of High Tech** Todd Gannon, 2017-09-05 Reyner Banham and the Paradoxes of High Tech reassesses one of the most influential voices in twentieth century architectural history through a detailed examination of Banham's writing on High Tech architecture and its immediate antecedents Taking as a guide Banham's habit of structuring his writings around dialectical tensions Todd Gannon sheds new light on Banham's early engagement with the New Brutalism of Alison and Peter Smithson his measured enthusiasm for the clip on approach developed by Cedric Price and the Archigram group his advocacy of well tempered environments fostered by integrated mechanical and electrical systems and his late career assessments of High Tech practitioners such as Norman Foster Richard Rogers and Renzo Piano Gannon devotes significant attention to Banham's late work including fresh archival materials related to Making Architecture The Paradoxes of High Tech the manuscript he left unfinished at his death in 1988 For the first time readers will have access to Banham's previously unpublished draft introduction to that book
