**An Architecture of Place** Randall S. Lindstrom, 2024-06-25 Challenging mainstream architecture's understandings of place this book offers an illuminating clarification that allows the idea's centrality in all aspects of everyday design thinking to be rediscovered or considered for the first time Rigorous but not dense practical but not trivialising the book unfolds on three fronts First it clearly frames the pertinent aspects of topology the philosophy of place importantly differentiating two concepts that architecture regularly conflates place and space Second it rejects the ubiquitous notion that architecture makes place and instead reasons that place is what makes architecture and the built environment possible that place calls for and to architecture and that architecture is thus invited to listen and respond Finally it turns to the matter of designing responses that result not just in more places of architecture demanding little of design nor merely in architecture with some sense of place demanding little more but rising above those responses that constitute an architecture of place demanding the greatest vigilance but offering the utmost freedom Opening up a term regarded as so common that its meaning is seldom considered the author reveals the actual depth and richness of place its innateness to architecture and its essentiality to practitioners clients educators and students including those in all spatial disciplines **Programming the Built Environment (Routledge Revivals)** Wolfgang F. E. Preiser, 2015-07-24

Architectural programming the analysis of any given environment to satisfy users needs has become a given prerequisite to

the design process The programming process is often a complicated one users present and future needs must be identified space allowances often predetermined must be considered equipment must be accommodated all in the most cost effective way possible The variety of user groups is as wide as the variety of functions architecture can shelter moreover the different structures and needs of clients that fall within the same use classification differs so greatly that every program presents a new challenge You cannot for example use the same program for every hospital you design In *Programming the Built Environment* first published in 1985 noted architect Wolfgang F E Preiser has compiled a wide range of architectural programs demonstrating applications of basic principles for different client groups This book will be of interest to students of architecture and planning

**Professional Practice in Facility Programming (Routledge Revivals)** Wolfgang Preiser, 2015-06-11 This compelling resource which was first published in 1993 was the first book on facility programming to design parameters and specifications over a broad range of project types The book's practical how to approach is exceedingly beneficial to professionals and students involved with a wide variety of building types from corporate facilities to parks day care centres health centres and correctional facilities It also covers the fine points of working with clients The contributors provide real world case studies endowing the reader with the tools necessary to reap a deeper understanding and a more critical assessment of the major programming approaches today *Professional Practice in Facility Programming* is a uniquely current self contained resource that will prove invaluable to a wide cross section of practitioners and students

*Design Intervention (Routledge Revivals)* Wolfgang F. E. Preiser, Jacqueline Vischer, Edward White, 2015-05-15 *Design Intervention* Toward a More Humane Architecture first published in 1991 intends to demonstrate that interest in social issues is alive and well in architecture that there is a small but effective cadre of dedicated professionals who continue to commit themselves to solving social problems and that architecture is being applied to the alleviation of the social ills of our time The editors and contributors in this book have all grappled with their own definitions of design innovation and express in practical and useful ways their ideas for contributing to a better and less needy world through the architecture they describe This book will be of interest to students of architecture

*Methods of Architectural Programming (Routledge Revivals)* Henry Sanoff, 2016-05-20 First published in 1977 this volume was intended as a sourcebook for designers and attempts to specify the ingredients necessary to develop a design program rather than postulate a model program for which no consensus exists As such it filled a void in the existing literature which seldom covered programming with much depth and provides technical aids to guide designers The author attempts to integrate the pioneering contributions from others in order to identify the substance of programming for designers and represents a culling of the strategies and techniques from the social behavioural and management sciences building on the developing efforts of other disciplines
