Policy Analysis for Sustainable Land Management and Food Security in Ethiopia Stein Terje Holden, Shiferaw Bekele, Bekele Ambaye Shiferaw, J. Pender, 2005-01-01. Policymakers and technology development institutions have mostly focused on high potential farming areas which have better resource endowments and greater access to markets and infrastructure than less favored areas. However, in developing nations more than one billion people live in less favored areas where, despite disadvantages, appropriate policies and programs can generate high returns and contribute significantly to poverty reduction. IFPRI and its partners' research in the highlands of Ethiopia shows how poverty and land degradation can be reduced in a less favored area. Using a bioeconomic model to analyze the effects that land degradation, population growth, stagnant technology, market imperfections and increased risk of drought have on household production, welfare and food security, the report gauges how alternative policy choices affect poverty and land degradation. According to the study, land quality and household welfare are both in peril in the Ethiopian highlands. The population in the region could suffer devastating effects if proper policies are not put in place. The bioeconomic modeling approach used in this study can be usefully adapted and applied in many other settings and at larger spatial and socioeconomic scales.

Mathematical Modeling in Agriculture Sabyasachi Pramanik, Niranjanamurthy M., Ankur Gupta, Ahmed J. Obaid, 2024-10-16. The main goal of the book is to explore the idea behind data modeling in smart agriculture using information and communication technologies and tools to make agricultural practices more functional, fruitful and profitable. The research in the book looks at the likelihood and level of use of implemented technological components with regard to the adoption of different precision agricultural technologies. To identify the variables affecting farmers' choices to embrace more precise technology, zero-inflated Poisson and negative binomial count data regression models were utilized. Outcomes from the count data analysis of a random sample of various farm operators show that various aspects including farm dimension, farmer demographics, soil texture, urban impacts, farmer position of liabilities and position of the farm in a state were significantly associated with the approval, severity and likelihood of precision farming technologies. Farm management information systems (FMIS) have constantly advanced in complexity as they have incorporated new technology, the most recent of which is the internet. However, few FMIS have fully tapped into the internet's possibilities and the newly developing idea of precision agriculture receives little or no support in the FMIS that are now being sold. FMIS for precision agriculture must meet a few more criteria beyond those of regular FMIS which increases the technological complexity of these systems' deployment in a number of ways. In order to construct an FMIS that meet these extra needs, the authors here evaluated various cutting-edge web-based methods. The goal was to determine the

requirements that precision agriculture placed on FMIS

Farm-Level Modelling Shailesh Shrestha, Andrew

Barnes, Bouda Vosough Ahmadi, 2016-09-28 Agriculture is the product of a complex mixture of behavioural biophysical and market drivers Understanding how these factors interact to produce crops and livestock for food has been the focus of economic investigation for many years The advent of optimisation algorithms and the exponential growth in computing technology has allowed significant growth in mathematical modelling of the dynamics of agricultural systems The complexity of approaches has grown in parallel with the availability of data at increasingly finer resolutions Farm level models have been widely used in agricultural economic studies to understand how farmers and land owners respond to market and policy levers This book provides an in depth description of different methodologies and techniques currently used in farm level modelling While giving an overview of the theoretical grounding behind the models an applied approach is also used Case studies range from the application of modelling to policy reforms and the subsequent impacts on rural communities and food supply This book also provides descriptions of the use of farm level models in much wider fields such as aggregation and linking with sectoral models Its purpose is to show the reader the methods that have been employed to inform decision makers about how to improve the economic social and environmental goals required to achieve the aims of multidimensional policy
