Advancements in Algal Biofuels Research – Recent Evaluation of Algal Biomass Production and Conversion Methods of into Fuels and High Value Co-products

Umakanta Jena, S. Kent Hoekman, 2017-05-18 Algae biomass has enormous potential to produce fuels and value added products Algae derived biofuels and bioproducts offer great promise in contributing to U S energy security and in mitigating the environmental concerns associated with conventional fuels Algae s ability to grow in low quality water wastewater and to accumulate lipids has encouraged scientists to investigate algae as a medium for wastewater treatment and a potential source of fuel and bioproducts There are growing demands for biomass based transportation fuels including biodiesel bio oil biomethane biohydrogen and other high value products nutraceuticals proteins omega 3 etc Algae can help address these

needs The topic of algae energy includes the production and characterization of algae cultures conversion into fuel feedstocks and high value products and optimization of product isolation and use In view of the increasing efforts in algae biomass production and conversion into energy and high value products the current research topic covers important aspects of algal strain selection culture systems inorganic carbon utilization lipid metabolism and quality biomass harvesting extraction of lipids and proteins and thermochemical conversion of algal feedstocks into biocrude Biofuels from Algae Man Kee Lam,Keat Teong Lee,2013-08-08 Algae are currently being considered as a versatile feedstock for biofuel production because of their fast growth rate and high biomass productivity Algae could simultaneously act as a carbon sink and water purifier if their cultivation were coupled with flue gas and wastewater treatment respectively Hence an understanding of the overall supply chains for algal biofuel production is exceptionally important to determine whether it is worthwhile to scale up and commercialize algal cultivation for biofuel production In this chapter various aspects and constraints associated with the commercialization of algal biofuels are deliberated in detail especially from the perspective of life cycle energy balance In addition discussions on the economic assessments of algal biofuels are included in this chapter to provide an overview of the current state of algal biofuels in the fuel market Potential algal biofuel conversion technologies such as transesterification starch hydrolysis and fermentation pyrolysis and hydrothermal liquefaction are also presented

Value Added Products From Bioalgae Based Biorefineries: Opportunities and Challenges Shailendra Kumar Arya,Madhu Khatri,Gursharan Singh,2024-05-27 This book covers wide aspects of algal technology and algae based biorefinery aspects Algae are the most prevalent primitive and abundant microbes on Earth however the commercialization of algal based value added products is still low due to the negligible dissemination of knowledge flow among the stakeholders and researchers This book provides up to date information on the cultivation of microalgae their harvesting downstream processing and diverse applications It further discusses the macromolecules existing in microalgae such as proteins carbohydrates and lipids poly unsaturated fatty acids peptides exo polysaccharides flavonoids and antioxidants This book also highlights the advantages and some real time challenges before the establishment of sustainable algal based biorefineries Further it includes clear flow charts and figures in each chapter to aid in interpretation of every technical concept This book motivates readers entrepreneurs and young farmers to exploit easily growing microalgae through cottage to large scale biorefineries and start their own businesses for the production of value added products
