These can be in the form of internal combustion engines or other propulsion technologies eg Fuel cell in both direct drive and hybridised configuration. 14th International Conference on Turbochargers and Turbocharging also provides a particular focus on turbochargers superchargers waste heat recovery turbines and related air managements components in both electrical and mechanical forms.

Computational Methods in Multiphase Flow V Andrea Alberto Mammoli, C. A. Brebbia, 2009. Together with turbulence multiphase flow remains one of the most challenging areas of computational mechanics and experimental methods and numerous problems remain unsolved to date. Multiphase flows are found in all areas of technology at all length scales and flow regimes. The fluids involved can be compressible or incompressible linear or nonlinear. Because of the complexity of the problems it is often essential to utilize advanced computational and experimental methods to solve the complex equations that describe them. Challenges in these simulations include modelling and tracking interfaces dealing with multiple length scales modelling nonlinear fluids treating drop breakup and coalescence characterizing phase structures and many others. Experimental techniques although expensive and difficult to perform are essential to validate models. This book contains papers presented at the Fifth International Conference on Computational Methods in Multiphase Flow which are grouped into the following topics: Multiphase Flow Simulation Interaction of Gas Liquids and Solids Turbulent Flow Environmental Multiphase Flow Bubble and Drop Dynamics Flow in Porous Media Heat Transfer Image Processing Interfacial Behaviour.
