Ettouney, Sreenivas Alampalli, 2011-09-27 Continually increasing demands on infrastructures mean that maintenance and renewal require timely appropriate action that maximizes benefits while minimizing cost To be as well informed as possible decision makers must have an optimal understanding of an infrastructure s condition what it is now and what it is expected to be in the future Written by two highly respected engineers the second volume Infrastructure Health in Civil Engineering Applications and Management integrates the decision making concept into theoretical and practical issues It covers State of the art practice and future directions Use of probability and statistics in areas including structural modeling Specific practical applications including retrofitting and rehabilitation in response to earthquake damage corrosion fatigue and bridge security Use of IHCE for management and maintenance of different types of structures using pre stressed and reinforced concrete and fiber reinforced polymers FRPs Numerous practical case studies as well as coverage of the latest techniques in the use of sensors for damage detection and load testing Built to correspond to the ideas presented in its companion volume Theory and Components this is an invaluable guide to optimized cost saving methods that will help readers meet safety specifications for new projects as well as the aging infrastructure at great risk of failure School Library Journal , 2010 *Long Term Durability of Structural Materials* P.J.M. Monteiro, K.P. Chong, J. Larsen-Basse, K. Komvopoulos, 2001-08-29 Long Term Durability of Structural Materials features proceedings of the workshop held at Berkeley CA in October 2000 It brought together engineers and scientists who have received grants from the initiative NSF 98 42 to share their results on the study of long term durability of materials and structures The major objective was to develop new methods for accelerated short term laboratory or in situ tests which allow accurate reliable predictions of the long term performance of materials machines and structures To achieve this goal it was important to understand the fundamental nature of the deterioration and damage processes in materials and to develop innovative ways to model the behavior of these processes as they affect the life and long term performance of components machines and structures The researchers discussed their approach to include size effects in scaling up from laboratory specimens to actual structures Accelerated testing and durability modeling techniques developed were validated by comparing their results with performance under actual operating conditions The main mechanism of the deterioration discussed included environmental

effects and or exposure to loads speeds and other operating conditions that are not fully anticipated in the original design A broad range of deterioration damage such as fatigue overload ultraviolet damage corrosion and wear was presented A broad range of materials of interest was also discussed including the full spectrum of construction materials metals ceramics polymers composites and coatings Emphasis was placed on scale dependence and history of fabrication on resulting mechanical behavior of materials
