Beyond Mechanism Brian G. Henning, Adam Scarfe, 2013-02-01 It has been said that new discoveries and developments in the human social and natural sciences hang in the air Bowler 1983 2008 prior to their consummation While neo Darwinist biology has been powerfully served by its mechanistic metaphysic and a reductionist methodology in which living organisms are considered machines many of the chapters in this volume place this paradigm into question Pairing scientists and philosophers together this volume explores what might be termed the New Frontiers of biology namely contemporary areas of research that appear to call an updating a supplementation or a relaxation of some of the main tenets of the Modern Synthesis Such areas of investigation include Emergence Theory Systems Biology Biosemiotics Homeostasis Symbiogenesis Niche Construction the Theory of Organic Selection also known as the Baldwin Effect Self Organization and Teleodynamics as well as Epigenetics Most of the chapters in this book offer critical reflections on the neo Darwinist outlook and work to promote a novel synthesis that is open to a greater degree of inclusivity as well as to a more holistic orientation in the biological sciences

Ontogenesis Beyond Complexity Cary Wolfe, Adam Nocek, 2021-12-26 This book is based upon the collaborative efforts of the Ontogenetics Process Group OPG an interdisciplinary multi institutional multi national research group that began meeting in 2017 to explore new and innovative ways of thinking the problem of complexity in living physical and social systems outside the algorithmic models that have dominated paradigms of complexity to date For all the descriptive and predictive power that the complexity sciences offer the ability to compute feedback systems recursive networks emergent dynamics etc they also presume that the living world in all of its modalities biological semiotic economic affective social can be reduced to finite schema of description that delimits in advance all possible outcomes What is proposed in this volume are conceptual architectures for the living that are not only irreducible to physico mathematical frames of reference but that are also as vital as the phenomena they wish to express In short life is more complex than

complexity What emerges from this engagement is not the ascendance of a new transcendental principle or what amounts to the same thing a foundational bedrock derived from the physico mathematical sciences but just the opposite a domain in which the ontological and the epistemological domains enter a zone of strange and unavoidable entanglement The chapters in this book were originally published as a special issue of *Angelaki* The Bloomsbury Handbook of World Theory Jeffrey R. Di Leo, Christian Moraru, 2021-11-18 Disciplines from literary studies to environmentalism have recently undergone a spectacular reorientation that has refocused entire fields methodologies and vocabularies on the world and its sister terms such as globe planet and earth The Bloomsbury Handbook of World Theory examines what world means and what it accomplishes in different zones of academic study The contributors raise questions such as What happens when world is appended to a particular form of humanistic or scientific inquiry How exactly does worlding bear on the theoretical operating system and the history of that field What is the theory or theoretical model that allows world to function in a meaningful way in coordination with that knowledge domain With contributions from 38 leading theorists from a vast range of fields including queer studies religion and pop culture this is the first large reference work to consider the profound effect both within and outside the academy of the worlding of discourse in the 21st century Education from a Whiteheadian Point of View Vesselin Petrov, 2019-03-28 The basic aims of contemporary thinking in education are to cultivate a proper comprehension of the meaning and purpose of education and the role of the teacher and to develop adequate theoretical and methodological frameworks that combine some of the positive sides of the leading theories while avoiding their disadvantages Toward these ends one excellent candidate for consideration is Alfred North Whitehead's 1861-1947 process relational philosophy of education as set forth in *The Aims of Education* 1929 and elsewhere The contributors to this volume analyze Whitehead's philosophy of education in a detailed and critical fashion including inquiring into the development of cycle based approaches to education like Whitehead's in intellectual history as well as its potential objective bases They also demonstrate how this relates to and can be integrated with other leading theories of education and contemporary pedagogical thinking and identify avenues for its positive practical application in schooling across the globe as well as in scientific research The book further critically evaluates current educational practices and the organization of educational institutions in this light and the effectiveness of teaching strategies that are founded upon some of its principles while also exploring the ramifications of its selection and application in education for society in general as well as for our common civilizational aspirations including humanity's addressing of global problems such as the ecological crisis In addition the volume also serves to lay some of the groundwork for its potential further development *Divine Action and Emergence* Mariusz Tabaczek, 2021-05-15 *Divine Action and Emergence* puts the classical Aristotelian Thomistic tradition in conversation with current philosophy and theology As a middle path between classical theism and pantheism the panentheistic turn in the twentieth century has been described as a quiet revolution Today in fact many theologians hold that the world is in God who at the same time is more

than the world Panentheism has been especially influential in the dialogue between theology and the natural sciences Many have seen panentheism as compatible with emergentism and thus have brought the two together in developing models of divine action that do not abrogate the regularities of processes of the natural world In *Divine Action and Emergence* Mariusz Tabaczek argues that as inspiring and intriguing as emergentist panentheism is it requires deeper examination He begins by looking at the wonder of emergence which calls into question the overly reductionist attitude in natural science and by reflecting philosophically on emergence theory in light of classical and new Aristotelianism Moving in a theological direction Tabaczek then offers a critical evaluation of emergentist panentheism and a constructive proposal for how to reinterpret the idea of divine action as inspired by the theory of emergence with reference to the classical Aristotelian Thomistic understanding of God's action in the universe Through a unique interdisciplinary approach that puts theology and the natural sciences into a dialogue through philosophy *Divine Action and Emergence* offers a comprehensive evaluation of panentheism It then puts forward an original reinterpretation of emergence theory thus setting forth a constructive proposal for reinterpreting the concept of divine action that is currently espoused by emergence theory It will appeal to scholars of theology and philosophy those who work in the area of theology and science those interested in emergence theory or panentheism and finally those who are interested in the dialogue between the classical Aristotelian Thomistic tradition and contemporary philosophy and theology

Emergence Mariusz Tabaczek, 2019-07-25 Over the last several decades the theories of emergence and downward causation have become arguably the most popular conceptual tools in scientific and philosophical attempts to explain the nature and character of global organization observed in various biological phenomena from individual cell organization to ecological systems The theory of emergence acknowledges the reality of layered strata or levels of systems which are consequences of the appearance of an interacting range of novel qualities A closer analysis of emergentism however reveals a number of philosophical problems facing this theory In *Emergence* Mariusz Tabaczek offers a thorough analysis of these problems and a constructive proposal of a new metaphysical foundation for both the classic downward causation based and the new dynamical depth accounts of emergence theory developed by Terrence Deacon Tabaczek suggests ways in which both theoretical models of emergentism can be grounded in the classical and the new dispositionalist versions of Aristotelianism This book will have an eager audience in metaphysicians working both in the analytic and the Thomistic traditions as well as philosophers of science and biology interested in emergence theory and causation

A (Bio)Semiotic Theory of Translation Kobus Marais, 2018-10-25 This volume outlines a theory of translation set within the framework of Peircean semiotics which challenges the linguistic bias in translation studies by proposing a semiotic theory that accounts for all instances of translation not only interlinguistic translation In particular the volume explores cases of translation which does not include language at all The book begins by examining different conceptualizations of translation to highlight how linguistic bias in translation studies and semiotics has informed these fields and their development The

volume then outlines a complexity theory of translation based on semiotics which incorporates process philosophy semiotics and translation theory It posits that translation is the complex systemic process underlying semiosis the result of which produces semiotic forms The book concludes by looking at the implications of this conceptualization of translation on social cultural emergence theory through an interdisciplinary lens integrating perspectives from semiotics social semiotics and development studies Paving the way for scholars to analyze translational aspects of all semiotic phenomena this volume is essential reading for graduate students and researchers in translation studies semiotics multimodal studies cultural studies and development studies

Ecological Genomics Christian R. Landry, Nadia Aubin-Horth, 2013-11-25 Researchers in the field of ecological genomics aim to determine how a genome or a population of genomes interacts with its environment across ecological and evolutionary timescales Ecological genomics is trans disciplinary by nature Ecologists have turned to genomics to be able to elucidate the mechanistic bases of the biodiversity their research tries to understand Genomicists have turned to ecology in order to better explain the functional cellular and molecular variation they observed in their model organisms We provide an advanced level book that covers this recent research and proposes future development for this field A synthesis of the field of ecological genomics emerges from this volume Ecological Genomics covers a wide array of organisms microbes plants and animals in order to be able to identify central concepts that motivate and derive from recent investigations in different branches of the tree of life Ecological Genomics covers 3 fields of research that have most benefited from the recent technological and conceptual developments in the field of ecological genomics the study of life history evolution and its impact of genome architectures the study of the genomic bases of phenotypic plasticity and the study of the genomic bases of adaptation and speciation

Theory Across Disciplines Jeffrey R. Di Leo, 2025-08-07 Surveying the extraordinary scope of contemporary theory Jeffrey R Di Leo brings together contributors from around the world to speak to the ways in which theoretical concerns from a variety of disciplines operate within their respective fields of concern Contemporary theory is a multi and inter disciplinary endeavour that operates within and among the humanities the social sciences and many of the professions In addition to its now somewhat more standard fare work in these areas it has also made substantial inroads into the natural sciences and the formal sciences To be sure more disciplines from across the academy have integrated theory into their practice than at any other time in history Di Leo and his fellow contributors survey the workings of contemporary theory within and among the humanities sciences and professions including contributions on literary studies film studies gender studies visual art law biology and geology They bring together distinguished theorists whose work spans the academy to speak to the ways in which theoretical concerns from a variety of disciplines work within their respective fields of concern
