**Nature's Laboratory** Elizabeth Grennan Browning, 2022-11-15 The untold history of how Chicago served as an important site of innovation in environmental thought as America transitioned to modern industrial capitalism In *Nature's Laboratory* Elizabeth Grennan Browning argues that Chicago a city characterized by rapid growth severe labor unrest and its position as a gateway to the West offers the clearest lens for analyzing the history of the intellectual divide between countryside and city in the United States at the end of the nineteenth century By examining both the material and intellectual underpinnings of Gilded Age and Progressive Era environmental theories Browning shows how Chicago served as an urban laboratory where public intellectuals and industrial workers experimented with various strains of environmental thinking to resolve conflicts between capital and labor between citizens and their governments and between immigrants and long term residents Chicago she argues became the taproot of two intellectual strands of American environmentalism both emerging in the late nineteenth century first the conservation movement and the discipline of ecology and second the sociological and anthropological study of human societies as natural communities where human behavior was shaped in part by environmental conditions Integrating environmental labor and intellectual history *Nature's Laboratory* turns to the workplace to explore the surprising ways in which the natural environment and ideas about nature made their way into factories and offices places that appeared the most removed from the natural world within the modernizing city As industrialization urbanization and immigration transformed Chicago into a microcosm of the nation's transition to modern industrial capitalism environmental thought became a protean tool that everyone from anarchists and industrial workers to

social scientists and business managers looked to in order to stake their claims within the democratic capitalist order Across political and class divides Chicagoans puzzled over what relationship the city should have with nature in order to advance as a modern nation Browning shows how historical understandings of the complex interconnections between human nature and the natural world both reinforced and empowered resistance against the stratification of social and political power in the city

Natural Attachments Pollyanna Rhee, 2025-05-08 A nuanced analysis takes a California oil spill as its point of departure to show how affluent homeowners pushed for an environmentalism that would protect not only the earth but also property and community norms A massive oil spill in the Pacific Ocean near Santa Barbara California in 1969 quickly became a landmark in the history of American environmentalism helping to inspire the creation of both the Environmental Protection Agency and Earth Day But what role did the history of Santa Barbara itself play in this As Pollyanna Rhee shows the city's past and demographics were essential to the portrayal of the oil spill as momentous Moreover well off and influential Santa Barbarans were positioned to domesticate the larger environmental movement by embodying the argument that individual homes and families not society as a whole needed protection from environmental abuses This soon would put environmental rhetoric and power to fundamentally conservative not radical ends
