

Populations Lab Report

Instructions: The Virtual Populations Lab is on the lesson assessment page. Gather data to evaluate Sebastian's Snorkel Spot's claim that a new factory is polluting the coral reef. Follow the instructions as you move through the lab and record your data and observations in the lab report.

Title: sebastian snorkel spot

Objective(s): to see if the the run off and pollution from the new factory is is causing the reef and fish to die.

Hypothesis: if the pollution levels will keep increasing ,then the health of the reef will decrease

Variables: independent variable- additional pollution and runoff from the factory.
dependent variable-the health of the reef measured by water clarity, dissolved oxygen, live coral coverage, and stoplight parrotfish population.

Procedure

During the research phase, you found that the factory is not using nutrient-removal treatment on the water it releases. Excess nutrients in the water encourage algae growth, which can smother coral. To monitor the water quality and health of the coral reef, you will collect data on five factors: water clarity, dissolved oxygen levels, percentage of live coral coverage, number of juvenile parrot fish observed, and number of mature parrotfish observed.

Data:

Record your data from the virtual lab in the data table.

Week	Water Clarity (m)	Dissolved Oxygen Level (mg/L)	Percentage of Live Coral Coverage (%)	Number of Juvenile Parrotfish	Number of Mature Parrotfish
0	6 meters	14	35%	8	12
1	4 meters	12	30%	7	12
2	3 meters	10	25%	7	11
