

Chapter 1: Introduction to Biology

Biology: the study of life; biodiversity, living processes, living systems and organization in life

- Life is very diverse in size (length), where its found (location), and how it obtains energy (a butterfly to a flower, flower to sun)
- In extreme Environments, the only living thing is the Archaea
- Cell: the smallest structural of life
 - Cells are tiny compartments coerced with membrane that can grow and reproduce
 - All cells contain genetic information (DNA)
 - All cells are enclosed in a surrounding cell membrane
- Cells are described one of two types:
 - Prokaryotic cells: simple cells with little internal structure and no nucleus
 - Eukaryotic cells: complex cells containing a nucleus and other membrane bound organelles
- Organisms are either made up of one cell (unicellular) or many cells (multicellular)
- Unicellular are cells which if separated can still live individually
- Multicellular are cells which need other cells to live, once separated they would no longer be able to live
- if each cell has a nucleus then it is a unicellular because once taken apart, the nucleus would still be able to live, if one single cell only had one nucleus then once taken apart the cell would die almost immediately
- Domains: Bacteria, Archaea, Eukarya
- Classification Table: Dumb Kings Play Chess On Fine Glass Tables

Characteristics of Life: Ordered, Responds to stimulus, Grow, Develops and reproduces, Adapts, Regulates and maintains homeostasis, and process energy
