Biomolecular Forms And Functions A Celebration Of 50 Years Of The Ramachandran Map:

Biomolecular Forms and Functions Manju Bansal,N. Srinivasan,2013 This volume is primarily a compilation of contributed articles representing the impact and application of Ramachandran s work on conformation analysis of biopolymers as well as recent advances in macromolecular structural biology involving diverse experimental and computational approaches This volume is being published to coincide with a conference on Biomolecular Forms and Functions A celebration of 50 years of the Ramachandran Map being held at the Indian Institute of Science Bangalore in January 2013 *Biomolecular Forms and Functions* N. Srinivasan,2013 Understanding the functions and properties of molecules in living systems requires a detailed knowledge of their three dimensional structures and the conformational variability that allows them to adopt multiple functional forms Interpreting biological systems in the language of three dimensional structures is of fundamental importance and innumerable research groups around the world are working in this area This book is a compilation of articles describing attempts at understanding the intricacies of biological systems through the structures of and interactions between their constituent molecules

Artificial Intelligence on Dark Matter and Dark Energy Ariel Fernández,2023-08-24 As we prod the cosmos at very large scales basic tenets of physics seem to crumble under the weight of contradicting evidence This book helps mitigate the crisis It resorts to artificial intelligence AI for answers and describes the outcome of this quest in terms of an ur universe a quintessential compact multiply connected space that incorporates a fifth dimension to encode space time as a latent manifold In some ways AI is bolder than humans because the huge corpus of knowledge starting with the prodigious Standard Model SM of particle physics poses almost no burden to its conjecture framing processes Why not feed AI with the SM enriched by the troubling cosmological phenomenology on dark matter and dark energy and see where AI takes us vis vis reconciling the conflicting data with the laws of physics This is precisely the intellectual adventure described in this book and to the best of our knowledge in no other book on the shelf As the reader will discover many AI conjectures and validations ultimately make a lot of sense even if their boldness does not feel altogether human yet This book is written for a broad readership Prerequisites are minimal but a background in college math physics computer science is desirable This book does not merely describe what is known about dark matter and dark energy but also provides readers with intellectual tools to engage in a quest for the deepest cosmological mystery

Recent Innovations in Sciences and Humanities M. Priya,V. Anandan,2025-03-14 The Conference covered a wide range of themes in various disciplines In the field of English the conference focused on digital tools in teaching and learning the use of AI in language teaching and learning literature in English language teaching teacher training and professional development as well as linguistic competence in English language teachers For those interested in mathematics the conference explored topics such as computational methods for linear and non linear optimization mathematical models for computer science numerical analysis boundary value problems real and complex analysis

probability and statistics fluid dynamics sequence spaces mathematics education applied mathematics differential equations and game theory In the field of physics the conference delved into materials science and engineering functional materials computational materials science nanomaterials and nanotechnology structural materials photonic materials engineering biomaterials biomechanics and biosensors Lastly in the field of chemistry the conference discussed materials chemistry composite coating and ceramic materials soft matter and nanoscale materials energy systems and materials functional thin film materials nanostructures and nanofilms polymers and biopolymers as well as surface science and engineering

Topological Dynamics in Metamodel Discovery with Artificial Intelligence Ariel Fernández, 2022-12-21 The leveraging of artificial intelligence AI for model discovery in dynamical systems is cross fertilizing and revolutionizing both disciplines heralding a new era of data driven science This book is placed at the forefront of this endeavor taking model discovery to the next level Dealing with artificial intelligence this book delineates AI s role in model discovery for dynamical systems With the implementation of topological methods to construct metamodels it engages with levels of complexity and multiscale hierarchies hitherto considered off limits for data science Key Features Introduces new and advanced methods of model discovery for time series data using artificial intelligence Implements topological approaches to distill machine intuitive models from complex dynamics data Introduces a new paradigm for a parsimonious model of a dynamical system without resorting to differential equations Heralds a new era in data driven science and engineering based on the operational concept of computational intuition Intended for graduate students researchers and practitioners interested in dynamical systems empowered by AI or machine learning and in their biological engineering and biomedical applications this book will represent a significant educational resource for people engaged in AI related cross disciplinary projects **Methods in**
