Reasoning Web: Logical Foundation of Knowledge Graph Construction and Query

Answering Jeff Z. Pan, Diego Calvanese, Thomas Eiter, Ian Horrocks, Michael Kifer, Fangzhen Lin, Yuting Zhao, 2017-02-28 This volume contains some lecture notes of the 12th Reasoning Web Summer School RW 2016 held in Aberdeen UK in September 2016 In 2016 the theme of the school was Logical Foundation of Knowledge Graph Construction and Query Answering The notion of knowledge graph has become popular since Google started to use it to improve its search engine in 2012 Inspired

by the success of Google knowledge graphs are gaining momentum in the World Wide Web arena Recent years have witnessed increasing industrial take ups by other Internet giants including Facebook's Open Graph and Microsoft's Satori The aim of the lecture note is to provide a logical foundation for constructing and querying knowledge graphs Our journey starts from the introduction of Knowledge Graph as well as its history and the construction of knowledge graphs by considering both explicit and implicit author intentions The book will then cover various topics including how to revise and reuse ontologies schema of knowledge graphs in a safe way how to combine navigational queries with basic pattern matching queries for knowledge graph how to setup an environment to do experiments on knowledge graphs how to deal with inconsistencies and fuzziness in ontologies and knowledge graphs and how to combine machine learning and machine reasoning for knowledge graphs

Finite Representations of CCS and TCSP Programs by Automata and Petri Nets Dirk A. Taubner, 1989-08-09 This work relates different approaches for the modelling of parallel processes On the one hand there are the so called process algebras or abstract programming languages with Milner's Calculus of Communicating Systems CCS and the theoretical version of Hoare's Communicating Sequential Processes CSP as main representatives On the other hand there are machine models i.e. the classical finite state automata transition systems for which however more discriminating notions of equivalence than equality of languages are used and secondly there are differently powerful types of Petri nets namely safe and general place transition nets respectively and predicate transition nets Within a uniform framework the syntax and the operational semantics of CCS and TCSP are explained We consider both Milner's well known interleaving semantics which is based on infinite transition systems as well as the new distributed semantics introduced by Degano et al which is based on infinite safe nets The main part of this work contains three syntax driven constructions of transition systems safe nets and predicate transition nets respectively Each of them is accompanied by a proof of consistency Due to intrinsic limits which are also investigated here neither for transition systems and finite nets nor for general nets does a finite consistent representation of all CCS and TCSP programs exist However sublanguages which allow finite representations are discerned On the other hand the construction of predicate transition nets is possible for all CCS programs in which every choice and every recursive body starts sequentially
