Computational Methods in Multiphase Flow VII C. A. Brebbia, P. Vorobieff, 2013-07-03 Multiphase flows are found in all areas of technology at all length scales and flow regimes and can involve compressible or incompressible linear or nonlinear fluids However although they are ubiquitous multiphase flows continue to be one of the most challenging areas of computational mechanics with numerous problems as yet unsolved Advanced computational and experimental methods are often required to solve the equations that describe such complex problems The many challenges that must be faced in solving them include modelling nonlinear fluids modelling and tracking interfaces dealing with multiple length scales characterising phase structures and treating drop break up and coalescence It is important to validate models which calls for the use of expensive and difficult experimental techniques This book presents contributions on the latest research in the techniques for solving multiphase

flow problems presented at the seventh in a biennial series of conferences on the subject that began in 2001. Featured topics include Flow in porous media, Turbulent flow, Multiphase flow simulation, Image processing, Heat transfer, Atomization, Interface behaviour, Oil and gas applications, Experimental measurements, Energy applications, Biological flows, Micro and macro fluids, Compressible flows.

Diagnostics and Reliability of Pipeline Systems Sviatoslav Timashev, Anna Bushinskaya, 2016-03-17. The book contains solutions to fundamental problems which arise due to the logic of development of specific branches of science which are related to pipeline safety but mainly are subordinate to the needs of pipeline transportation. The book deploys important but not yet solved aspects of reliability and safety assurance of pipeline systems which are vital aspects not only for the oil and gas industry and in general fuel and energy industries but also to virtually all contemporary industries and technologies. The volume will be useful to specialists and experts in the field of diagnostics, inspection, monitoring, reliability and safety of critical infrastructures. First and foremost it will be useful to the decision making persons, operators of different types of pipelines, pipeline diagnostics, inspection vendors and designers of in line inspection (ILI) tools, industrial and ecological safety specialists as well as to researchers and graduate students.
