

CHARACTERISTICS OF MARINE MAMMALS

BREATHE AIR

All marine mammals must come to the surface to breathe air. They breathe through their nose or blowhole, which is connected to the lungs, the same organ we use to breathe.

WARM-BLOODED

Marine mammals maintain a constant internal body temperature, even in cold ocean waters.

HAIR OR FUR

Some marine mammals, like sea otters, have thick fur to keep them warm. Others, like dolphins and whales, have almost no hair at all. They are born with whiskers, believed to aid in nursing, however these fall out shortly after birth.

LIVE BIRTH

Marine mammals give birth to live young rather than laying eggs.

MAMMARY GLANDS

Mothers produce milk to nourish their offspring.

Biology Of Marine Mammals:

Biology of Marine Mammals, 1979 An Introduction to Marine Mammal Biology and Conservation Simmonds, M.P., Bauer, A., Parsons, E.C.M., Wright, A.J., McCafferty, D., 2013 The charismatic mammals that live in the ocean are a constant source of interest both for scientists and our society at large Their biology behavior and conservation are of utmost importance as a vast number of species are currently threatened Intended for the upper level undergraduate or graduate student within biology marine biology or conservation environmental science An Introduction to Marine Mammal Biology and Conservation provides a broad introduction to marine mammal biology using cutting edge information and student friendly learning tools The text begins with chapters on the evolution and classification of marine mammals and their general biology It moves on to discuss the behavior and ecology of different groups of marine mammals such as polar bears otters and cetaceans Part 3 dives into many different conservation issues facing marine mammals as well as discussions on how they can be addressed Closing chapters provide information on how scientists study marine mammals how society can enjoy observing the animals while making sure they are preserved and a word to students looking to pursue a career with marine mammals Helpful Sidebars are included throughout to refresh basic biological information Includes hot topic discussion boxes written by top researchers in the field Point Counterpoints on controversial issues make for great in class discussion Intended for the upper level undergraduate or graduate course within biology marine biology or conservation environmental science 2013 350 pages *Biology of Marine Mammals* John E. Reynolds, 1999-09-17 Taking an integrated approach to the biology of marine carnivores cetaceans and sirenians twenty two prominent researchers compare marine mammals with one another and with terrestrial mammals providing a framework for fundamental biological and ecological concepts They describe functional morphology sensory systems energetics reproduction communication and cognition behavior distribution population biology and feeding ecology They also detail the physiological adaptations for such activities and processes as diving thermo regulation osmoregulation and orientation that enable marine mammals to exploit their aquatic environment

Marine Mammals Peter G.H. Evans, Juan Antonio Raga, 2012-12-06 Interest in marine mammals has increased dramatically in the last few decades as evidenced by the number of books scientific papers and conferences devoted to these animals Nowadays a conference on marine mammals can attract between one and two thousand scientists from around the world This upsurge of interest has resulted in a body of knowledge which in many cases has identified major conservation problems facing particular species At the same time this knowledge and the associated activities of environmental organisations have served to introduce marine mammals to a receptive public to the extent that they are now perceived by many as the living icons of biodiversity conservation Much of the impetus for the current interest in marine mammal conservation comes from Save the Whale campaigns started in the 1960s by environmental groups around the world in response to declining whale populations after over exploitation by humans This public pressure led to an international

moratorium on whaling recommended in 1972 by the United Nations Conference on the Human Environment in Stockholm Sweden and eventually adopted by the International Whaling Commission ten years later This moratorium largely holds sway to this day and further protective measures have included the delimitation of extensive areas of the Indian Ocean 1979 and Southern Ocean 1994 as whale sanctuaries **Physiology of Marine Mammals** Michael Castellini,Jo-Ann

Mellish,2023-07-05 Suppose you were designing a marine mammal What would they need to live in the ocean How would you keep them warm What design features would allow them to dive for very long periods to extreme depths Do they need water to drink How would they minimize the cost of swimming and how would they find their prey in the deep and dark These questions and more are examined in detail throughout Marine Mammal Physiology which explores how marine mammals live in the sea from a physiological point of view This undergraduate textbook considers the essential aspects of what makes a marine mammal different from terrestrial mammals beyond just their environment It focuses on the physiological and biochemical traits that have allowed this group of mammals to effectively exploit the marine environment that is so hostile to humans The content of this book is organised around common student questions taking the undergraduate s point of view as the starting point Each chapter provides a set of PowerPoint slides for instructors to use in teaching and students to use as study guides New Study Questions and Critical Thinking Points conclude each chapter which are each motivated by a Driving Question such as How do mammals stay warm in a cold ocean or How do mammals survive the crushing pressures of the deep sea Full colour images and comprehensive accessible content make this the definitive textbook for marine mammal physiology *Biology of Marine Mammals* Hyman Dunn,2017-06-28 Marine mammal biology studies mammals such as

whales seals polar bears etc that rely on the aquatic ecosystem for their existence These animals are grouped together as they have a paraphyletic relation or share a common ancestor This book is a valuable compilation of topics ranging from the basic to the most complex theories and principles in the field of marine mammal biology Also included in this text is a detailed explanation of the various concepts and insights of aquatic ecosystem The contents of this text are of utmost significance and are bound to provide incredible insights to the readers Marine Mammal Biology A.
