Omics for Personalized Medicine Debmalya Barh, Dipali Dhawan, Nirmal Kumar Ganguly, 2013-10-14 Omics for Personalized Medicine will give to its prospective readers the insight of both the current developments and the future potential of personalized medicine. The book brings into light how the pharmacogenomics and omics technologies are bringing a revolution in transforming the medicine and the health care sector for the better. Students of biomedical research and medicine along with medical professionals will benefit tremendously from the book by gaining from the diverse fields of knowledge of new age personalized medicine presented in the highly detailed chapters of the book. The book chapters are divided into two sections for convenient reading with the first section covering the general aspects of pharmacogenomic technology that includes latest research and development in omics technologies. The first section also highlights the role of omics in modern clinical trials and even discusses the ethical consideration in pharmacogenomics. The second section is focusing on the development of personalized medicine in several areas of human health. The topics covered range from metabolic and neurological disorders to non communicable as well as infectious diseases and even explores the role of pharmacogenomics in cell therapy and transplantation technology. Thirty four chapters of the book cover several aspects of pharmacogenomics and personalized medicine and have taken into consideration the varied interest of the readers from different fields of biomedical research and medicine. Advent of pharmacogenomics is the future of modern medicine which has resulted from culmination of decades of research and now is showing the way forward. The book is an honest endeavour of researchers from all over the world to disseminate the latest knowledge and knowhow in personalized medicine to the community health researchers in particular and the educated public in general.

Personalized Nutrition in Chronic Kidney Disease, 2nd edition Lara Caldiroli, Alice Sabatino, Andreana De Mauri, 2024-11-08 Nutritional status is a crucial prognostic factor in chronic kidney disease (CKD) patients. The nutritional approach depends on the stage of renal disease, patients' comorbidities, proteins catabolism and the presence of malnutrition. The gradual and progressive worsening of kidney function, characterized by a reduced glomerular filtration rate, carries many challenges for both young and elderly patients. Dietetic nutritional therapy (DTN) has an important role in the prevention and in the progression of Chronic Kidney Disease. An appropriate nutritional approach contributes to the prevention and control of signs, symptoms and metabolic complications of CKD such as hyperkalemia, hyperphosphatemia and metabolic acidosis. It also helps avoid malnutrition and protein energy wasting (PEW). Several dietary approaches have been proposed but the most successful nutritional regimen is the one tailored on patients' needs. This Research Topic is open for original articles, narrative review, systematic review and meta-analysis focusing on personalized nutrition in patients with CKD on both conservative and replacement treatments. Suggested topics relating to renal nutrition and chronic kidney disease may include but are not limited to: Use of amino acids or keto analogues supplementation in CKD patients in conservative therapy or in dialysis; Strategies to improve dietary

adherence Psychological aspects of nutritional adherence Nutritional indications in inflamed CKD patients Interaction between diet microbiota and comorbidities Personalized nutritional counseling Strategies to avoid malnutrition and PEW
