Essays on Biopharmaceutical Supply Chains Marouen Ben Jebara, 2015 An emerging trend in the pharmaceutical industry is the high level of personalization of medicines that firms offer today Such medications are expected to account for 50% of the amount spent on drugs by 2018 In conjunction with the growth of this new class of medications firms are also continuing to serve markets for traditional or small molecule medications which are often standardized or mass customized for consumer markets Managing the diverse portfolio of medications can require different supply chain structures specifically with respect to distribution channels For example the prostate cancer vaccine involves a reverse flow of raw material in the form of patient blood cells from the hospital physician clinic to the pharmaceutical firm processing centers a characteristic that is often not seen with traditional medications that are dispensed at the pharmacy or hospital This has led to a new trend in the distribution channel practices for such medication i e supply chain disintermediation where the firm engages in a direct sales model which means that the medication is shipped directly to the patient or the administering facility e g the physician s clinic hospital instead of being distributed through the traditional channel of wholesalers In summary firms today have a choice of structuring their supply chains to have a traditional intermediated distribution channel a direct disintermediated distribution channel or combination thereof However little research exists that can guide managerial decisions with respect to the appropriate supply chain structure given the portfolio of the firm s medication offerings The firm s choices for product portfolio and supply chain structure for distribution channels raise a critical question of what is the most appropriate supply chain disintermediation strategy given the firm s product portfolio Therefore in this dissertation the research objective is to address this central question In addressing this research objective the dissertation is composed of four distinct essays The first essay is aimed at answering the above question conceptually It maps the evolution of the pharmaceutical product paradigm along a continuum of standardized mass customized mass personalized products as well as discusses the evolution of the supply chain structure in terms of disintermediation for pharmaceutical firms Drawing on literature in operations management in the areas of mass customization and supply chain disintermediation as well as industry practices the study presents a framework which identifies the appropriate supply chain structure intermediated vs disintermediated given the level of personalization of pharmaceutical products Additionally a critical characteristic of personalized biologics medicine is its time sensitive nature and consequent market mediation costs that make logistical design a critical issue To understand how management science tools can guide managerial decision making the second essay investigates this location decision problem for highly

personalized products under a total disintermediation strategy assumption Results based on the analysis of a case study are presented In addition to the time sensitivity and consequent market mediation costs that result from the short shelf life of personalized biologics products firms also face varying levels of demand uncertainty for such products making the disintermediation strategy decisions crucial Therefore the third essay aims to understand the behavior of the total market mediation costs given the level of demand variability and the firm s supply chain disintermediation strategy An evaluative study based on a scenario approach is presented The results from a scenario approach analysis and a large scale numerical study provide insights about the appropriate supply chain disintermediation strategy given the pharmaceutical firm s product characteristics The results shows the dominance of demand variability in shaping the total market mediation cost High demand variability favors intermediated distribution channels whereas disintermediation strategy is preferred when the shortage cost ratio is high The contrast analysis provides evidence of the area of distribution strategy indifference Finally recognizing that a pharmaceutical firm s choice regarding its product portfolio standardized mass customized mass personalized products and supply chain disintermediation strategy intermediated hybrid disintermediated has implications for its financial performance the fourth essay aims to empirically assess the financial performance consequences of the fit between the firm s product portfolio and its supply chain disintermediation strategy This essay empirically examines the relationship between disintermediation product portfolio strategy and financial performance The results show that supply chain disintermediation positively impacts the firms financial performance Additionally the alignment between product portfolio and supply chain disintermediation has positive effects on return on assets and gross margin This dissertation contributes to operations management literature in terms of conceptually analytically and empirically assessing how a firm s choices for product personalization and supply chain disintermediation individually and collectively influence its performance It aims to provide actionable guidelines that can help firms match their supply chain disintermediation strategy with their product portfolio characteristics

Stronger Food and Drug Regulatory Systems Abroad

National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Global Health, Committee on Stronger Food and Drug Regulatory Systems Abroad, 2020-03-09 Ensuring the safety of food and the quality and safety of medicines in a country is an important role of government made more complicated by global manufacturing and international trade By recent estimates unsafe food kills over 400 000 people a year a third of them children under 5 mostly in low and middle income countries every year poor quality medicines cause about 70 000 excess deaths from childhood pneumonia and roughly 8 500 to 20 000 malaria deaths in sub Saharan Africa alone The Federal Drug Administration FDA Office of Global Policy and Strategy is charged with improving capacity of the agency s foreign counterpart offices and increasing understanding of the importance of regulatory systems for public health development and trade At the request of the FDA this study sets out a strategy to support good quality wholesome food and safe effective medical products around the world Its goal is to build on the momentum for strengthening regulatory systems and to set a course for sustainability and continued progress The 2012 report Ensuring Safe Food and Medical Products Through Stronger Regulatory Systems Abroad outlined strategies to secure international supply chains emphasized capacity building and support for surveillance in low and middle income countries and explored ways to facilitate work sharing among food and medical product regulatory agencies This new study assess progress made and the current regulatory landscape

Patient-Focused Network Integration in BioPharma Robert Handfield, 2018-10-08 The biopharmaceutical industry as we know it today is going through a massive upheaval as a result of the uncertainty of healthcare reform and increasing regulatory pricing pressure A wake up call to all sectors of the healthcare value chain Patient Focused Network Integration in BioPharma Strategic Imperatives for the Years Ahead explores patient focused network integration as quite possibly the only way for organizational evolution to occur The book discusses how to align enterprises with the patient at the center It details the historical context of the biopharmaceutical value chain and the current set of challenges facing the industry and then details the author s unique and sustainable agenda for change The book traces the critical but often ignored relationships between hospitals insurance companies biopharma manufacturers government regulators and clinical scientists For too long these parties have been operating in a void without recognizing the interconnectedness of their objectives even though these objectives are often competing and misaligned This book points out the gaps that exist and develops a set of recommendations regarding disease treatments clinical development of new products and collaboration between these players that can result in a sustainable solution to the healthcare mess Each chapter can be viewed as an independent essay in that it deals with a specific dimension of the healthcare value chain However together they provide an integrated discussion on how to begin the task of creating an integrated value chain network for healthcare The book begins with the patient and then works its way back down the value chain all the way to the drug development and clinical trials stage of the value chain The common thread throughout the chapters is the emphasis on collaboration strategic alignment and a focus on

delivering value to the end patient Very simply all parties in the healthcare value chain network must align their strategic planning to derive innovation solutions It is only through true collaboration and aligned thinking that the parties in the drug development distribution insurance payors and hospital provider network can deal with the incredible complexity and massive challenges that face the industry The book provides a compelling maturity model that enables readers to gauge the level of network integration their enterprise is at today and where they need to move in the future
