Bioremediation Technologies For Polycyclic Aromatic Hydrocarbon Compounds 58:

Environmental Bioremediation Technologies S.N. Singh,R. D. Tripathi,2007-02-05 Environmental contamination from both natural and anthropogenic sources is today a major environmental concern due to pervasiveness and persistence of many toxicants It is considered as an inevitable evil of our progress and modernization To decontaminate the soils sediments and waters polluted by anthropogenic activities the scientists and technologists have evolved different technologies over the years Although we have to pay high cost for physical and chemical environmental technologies but they are not eco friendly and safe Hence it was deeply realized to develop viable technologies employing microbes and plants to remediate not only metallic residues and radionuclides but also the xenobiotic compounds like PCBs PAHs PCPs petroleum sludge and the military wastes No doubt the scientists have also got some success in this endeavour and as the result many companies are in place today to promote the sale of plant or microbe based technologies to deal with specific environmental contamination challenges Besides these technologies are se driven and do not disturb the sites in cleaning process Bioremediation Technologies for Polycyclic Aromatic Hydrocarbon Compounds Andrea Leeson,Bruce C. Alleman,1999 Polycyclic aromatic hydrocarbon compounds PAHs are common and challenging contaminants that affect soil and sediments Methods for treating PAHs have undergone change and refinement in the recent past and this volume presents the latest trends in PAH remediation theory and practice The papers in this volume cover topics ranging from the remediation of manufactured gas plant MGP sites to the remediation of sediments The papers present lab and field studies characterization studies comparison studies and descriptions of technologies ranging from composting to thermally enhanced bioremediation to fungal technologies and other innovative approaches **Advanced Bioremediation Technologies and Processes for the Treatment of Synthetic Organic Compounds (SOCs)** Datta Madamwar,Kunal R. Jain,Chirayu Desai,Eric D. van Hullebusch,2021-11-26 Dr Datta Madamwar holds a provisional patent related to the theme of this Research Topic All other Topic Editors declare no competing interests with regards to the Research Topic subject **Fungi in Bioremediation** G. M. Gadd,2001-11-15 An authoritative account of the application of fungi to the treatment of environmental pollution

Innovative Treatment Technologies ,1991 **Sustainable Green Technologies for Environmental Management** Shachi Shah,V. Venkatramanan,Ram Prasad,2019-02-19 Our Earth is considered as a natural system which organizes and controls itself However the present scale of anthropogenic activity is unprecedented in the history of mankind compelling the intelligientia to ponder over the scientific causes of the problems processes and sustainable and pragmatic solutions The current rate of resource use and consumption pattern are depleting the planet s finite resources and damaging life supporting ecosystems A large number of toxic substances are increasingly found in air water soil and flora and fauna We are in the midst of a period of increasing interconnected and complex global challenges that seek action across temporal and spatial scales diverse sectors and concerted efforts from global citizens The environment on account of human s action has

been experiencing imbalances and ecological catastrophe Environmental issues like global climate change biodiversity loss the rapid depletion of natural resources degradation of global commons stratospheric ozone depletion have been restricting the safe operating space and transgressing the planetary boundaries endangering the existence of human societies The global environmental problems if not scientifically managed may end up in the civilizational collapse Nevertheless the underlying commonality among these environmental issues is interrelatedness complexity and difficulty in identifying and implementing solutions The global environmental challenges can be managed by adopting sustainable green technologies which dovetails the principles of environmental sustainability with social and ecological sustainability Green growth is construed as a new development paradigm that sustains economic growth while at the same time ensuring environmental sustainability

Genetically Engineered Organisms in Bioremediation Dr Inamuddin, Charles Oluwaseun Adetunji, Mohd Imran Ahamed, Tariq Altalhi, 2024-01-20 Genetically Engineered Organisms in Bioremediation provides comprehensive coverage of biotechnological applications of genetically engineered microorganisms for the bioremediation of polluted environments Chapters are contributed by international scientists with in depth knowledge expertise vision and commitment in their scientific profession They detail several genetically engineered microorganisms and their enzymes that could be applied to biologically break down persistent organic pollutants and recombinant DNA technologies which entail development of suicidal GEMs for effective and safe remediation of heavily polluted sites FEATURES Highlights genes that encode catabolic enzymes involved in the biodegradation of pollutants Explores combining genetically engineered microorganisms with bioaugmentation biostimulation and bioattenuation strategies Details the application of genetic engineering of bacteria for managing aromatic organic compounds under hypoxic conditions Discusses tracking techniques and suppression strategies of genetically modified microorganisms Written for researchers engineers and academics working in bioremediation microbiology and biotechnology this book is both timely and important

Microbial Metabolism of Xenobiotic Compounds Pankaj Kumar Arora, 2019-06-27 Xenobiotic compounds including pesticides nitrophenols pyridine polycyclic aromatic compounds and polychlorinated biphenyls are widely spread in environment due to anthropogenic activities Most of them are highly toxic to living beings due to their mutagenic and carcinogenic properties Therefore the removal of these compounds from environment is an essential step for environmental sustainability Microbial remediation has emerged as an effective technology for degradation of these xenobiotic compounds as microorganisms have unique ability to utilize these compounds as their sole source of carbon and energy The primary goal of this book is to provide detailed information of microbial degradation of many xenobiotic compounds in various microorganisms

Soil Remediation Science and Technology Jose Julio Ortega-Calvo, Frederic Coulon, 2024-06-21 This book reviews the latest advances in soil remediation and is an authoritative account of the environmental chemistry microbiology ecotoxicology and regulation policies of soil pollution The book also discusses possible pathways for innovation by incorporating state of the art knowledge

on sustainability nature based solutions and socio economical aspects Divided into four parts the book opens with an overview of the legal context and policy economy of soil pollution and remediation The management of contaminated soils has a high cost and although much of this cost is borne by companies there is also high public spending The strategic value of soil the extensive costs associated with the remediation of many polluted sites throughout the World and the current crisis demand for new solutions to soil remediation that are addressed in the following parts of the book In this book readers will find a comprehensive description of several remediation strategies by different pollution sources nature based solutions and physicochemical methods for the remediation of contaminated soils Particular attention is given to contaminated soils from industrial activities urban settings mining and military activities In the final chapter of the book the editors present a perspective of the field research trends and needs Given its breadth this book appeals to regulators industrial scientists and scholars alike

Biodegradation Technology Developments Robert L. Irvine, Subhas K. Sikdar, 1997-12-09

FROM THE INTRODUCTION This three volume series Bioremediation Principles and Practice provides state of the art description of advances in pollution treatment and reduction using biological means identify and address at a fundamental level broad scientific and technological areas that are unique to the subject or theme and that must be understood if advances are to be made and provide a comprehensive overview of new developments at the regulatory desk top bench scale pilot scale and full scale levels The series covers all media air water and soil sediment and blends the talents knowledge and know how of academic industrial governmental and international contributors The series addresses the removal of both hazardous and nonhazardous contaminants from the liquid solid and gas phase using biological processes This includes the biological treatment of wastes of municipal and industrial origin bioremediation of leachates soils and sediments and biofiltration for contaminated gases

Thank you for reading **Bioremediation Technologies For Polycyclic Aromatic Hydrocarbon Compounds 58**. As you may know, people have search hundreds times for their chosen novels like this Bioremediation Technologies For Polycyclic Aromatic Hydrocarbon Compounds 58, but end up in infectious downloads.

Rather than enjoying a good book with a cup of tea in the afternoon, instead they juggled with some malicious bugs inside their desktop computer.

Bioremediation Technologies For Polycyclic Aromatic Hydrocarbon Compounds 58 is available in our book collection an online access to it is set as public so you can get it instantly.

Our books collection hosts in multiple countries, allowing you to get the most less latency time to download any of our books like this one.
