Natural Language Processing

Yue Zhang, Zhiyang Teng, 2021-01-07

With a machine learning approach and less focus on linguistic details this gentle introduction to natural language processing develops fundamental mathematical and deep learning models for NLP under a unified framework

NLP problems are systematically organised by their machine learning nature including classification sequence labelling and sequence to sequence problems

Topics covered include statistical machine learning and deep learning models text classification and structured prediction models generative and discriminative models supervised and unsupervised learning with latent variables neural networks and transition based methods

Rich connections are drawn between concepts throughout the book equipping students with the tools needed to establish a deep understanding of NLP solutions adapt existing models and confidently develop innovative models of their own

Featuring a host of examples intuition and end of chapter exercises plus sample code available as an online resource this textbook is an invaluable tool for the upper undergraduate and graduate student

Natural Language in Business Process Models

Henrik Leopold, 2013-12-12

Natural language is one of the most important means of human communication It enables us to express our will to exchange thoughts and to document our knowledge in written sources

Owing to its substantial role in many facets of human life technology for automatically analyzing and processing natural language has recently become increasingly important

In fact natural language processing tools have paved the way for entirely new business opportunities

The goal of this book is to facilitate the automatic analysis of natural language in process models and to employ this analysis for assisting process model stakeholders

Therefore a technique is defined that automatically recognizes and annotates process model

element labels In addition this technique is leveraged to support organizations in effectively utilizing their process models in various ways The book is organized into seven chapters It starts with an overview of business process management and linguistics and continues with conceptual contributions on parsing and annotating process model elements with the detection and correction of process model guideline violations with the generation of natural language from process models and finally ends with the derivation of service candidates from process models

Springer Handbook of Speech Processing Jacob Benesty, M. M. Sondhi, Yiteng Huang, 2007-11-28 This handbook plays a fundamental role in sustainable progress in speech research and development With an accessible format and with accompanying DVD Rom it targets three categories of readers graduate students professors and active researchers in academia and engineers in industry who need to understand or implement some specific algorithms for their speech related products It is a superb source of application oriented authoritative and comprehensive information about these technologies this work combines the established knowledge derived from research in such fast evolving disciplines as Signal Processing and Communications Acoustics Computer Science and Linguistics
