Examples showing practices that have gone wrong and right Guidance for teaching disadvantaged students *Imagining the Future of Global Education* Yong Zhao, Brian Gearin, 2017-10-17 *Imagining the Future of Global Education* examines the Grand Educational Narrative GEN and the major institutions that shape and disseminate it The book focuses on national visions of education and the imaginary futures that nations seek to make reality It critiques how the GEN policy implementation process frequently turns dreams of upward mobility into nightmares In this way the book takes a distinctly different approach than most comparative and international education studies Rather than being oriented toward the past and asking how education systems around the world ended up where they are chapters in this volume seek an understanding of how various educational visions from around the world inform the present and shape the future Following an introductory summary of important concepts from scholarship on imaginary futures and global education reform the book is organized around three themes What Dreams are Made Of illustrating through three case studies what the GEN looks like at the national level and how it operates across national boundaries A Dream within a Dream considering some of the more novel trends in international education reform in order to provide insight into how dreams seem to function and Keeping Dreams from becoming Nightmares comprising three thematic essays that describe trends in education policy in one or more countries The book concludes with lessons for scholars and policymakers **What Works May Hurt—Side Effects in Education** Yong Zhao, 2018 Yong Zhao shines a light on the long ignored phenomenon of side effects of education policies and practices bringing a fresh and perhaps surprising perspective to evidence based practices and policies Identifying the adverse effects of some of the best educational interventions with examples from classrooms to boardrooms the author investigates causes and offers clear recommendations A highly readable and important book about the side effects of education reforms Every educator and researcher should take its lessons to heart Diane Ravitch New York University A stunning analysis of the problems encountered in our efforts to improve education If Yong Zhao has not delivered the death blow to naive empiricism he has at least severely wounded it Gene V Glass San Jos State University This book is a brilliantly written analysis of well known educational change efforts followed by a concrete call for action that no policymaker researcher teacher or education reform advocate should leave unread Pasi Sahlberg University of New South Wales Sydney Nothing less than the future of the republic is dealt with in this wonderful and crucial book about the field of educational research and policy David C Berliner Arizona State University **The Robot Factory** Joseph Ganem, 2018-08-27 This book exposes a disturbing misuse of the scientific method to advance policies and agendas that are in fact detrimental to both science and education The author a physics professor examines two related trends in education the practice of data driven reform and the disparaging of the traditional liberal arts in favor of programs with a heavy emphasis on science and technology Many of the reforms being foisted on educators have more in common with pseudo science than real science The reduction of education to a commodity and the shilling of science as a means to enhance corporate profits lead to an

impoverished and stunted understanding of science in particular and of education in general How is it possible for schools with all students learning at grade level to be rated as failing teachers to be rated as ineffective after all their students meet their learning outcomes rising grade school math standards to result in more college students needing remedial math politicians to disparage scientists and their results but argue that more students should study science These bizarre outcomes have happened and are the result of an education system that misuses and misrepresents math and science in the classroom and in crafting education policies This book exposes the flawed and fallacious thinking that is damaging education at all levels throughout the United States and makes a compelling case for rethinking the standardized optimized and quantified approaches in vogue in education today to accommodate the different needs of individual teachers and students
