**Computer-Supported Cooperative Work** Uwe M. Borghoff, Johann H. Schlichter, 2013-11-09 The terms groupware and CSCW computer supported cooperative work have received significant attention in computer science and related disciplines for quite some time now This book is a revised and extended version of the 2nd edition of the German textbook Rechnergestützte Gruppenarbeit Eine Einführung in verteilte Anwendungen It has two main objectives first to outline the meaning of both terms and second to point out both the numerous opportunities for users of groupware and the risks of applying such systems The book intends to introduce an area of distributed systems namely the computer support of individuals trying to solve a common problem in cooperation with each other but not necessarily having identical work pieces or working times Computer supported cooperative work is an interdisciplinary application domain It can be viewed as a synergism between the areas of distributed systems and multimedia communication on the one hand and between those of information science and socio organizational theory on the other hand Thus the book is meant to help students of all these disciplines as well as users and developers of systems which have communication and cooperation within groups as top priorities

Workflow Management Systems for Process Organisations Thomas Schael, 2007-12-03 All of us have learned a lot during this exercise and the enormous success of the first edition of this book shows the great international interest for the topic and the results A French edition appeared last year and met with equal interest Springer Verlag has therefore decided to publish a second edition of this book which is not just a reprint but brings the literature and results to the newest state This is a rare occurrence in the history of the LNCS series We congratulate Thomas Schael on this success and we are sure that reader scientists and practitioners will likewise profit from it Aachen and Milan Giorgio De Michelis Klaus Henning Matthias Jarke August 1998 Preface to the Second Edition This book is a bit of a mixture of scientific and management literature It is based on my research activities in the CSCW community and also reflects the last ten years of my professional experience in consulting I have had the opportunity to live in different cultural settings to work in many companies and to meet people all over the world which has helped me to reflect on what I was doing and to focus on the content of this book This second edition reflects the fast moving field of Computer Supported Cooperative Work CSCW and the discussion on Business Process Re engineering BPR It contains the latest developments in the scientific and managerial discussion of the issues developed in the first edition

The OPEN Process Specification

Ian Graham, Brian Henderson-Sellers, and Houman Younessi

following line is just a line on its own to highlight the OPEN acronym and explain what it stands for: pick out in some way the initial caps O P E and N: Object oriented Process Environment and Notation

The OPEN Process Specification describes a tailorable software development process, part of the OPEN methodological framework that has been formulated to take account of the differing requirements of projects and provide a flexible framework into which project-specific factors may be incorporated. Here, the reader will find a genuinely object-oriented, complete, detailed model of the whole process involved in developing both object-oriented and hybrid systems. The model may be used in conjunction with any object-oriented method or notation such as Coad, Firesmith, Odell, SOMA, or UML. This book shows how to use the OPEN process to organize, plan, and manage both large and small-scale object-oriented software development projects. The framework for the OPEN process consists of interconnecting activities which are represented as objects whose methods are the tasks needing to be accomplished. This model provides a strategy that enables professional software developers, project managers, and students of software engineering to approach all kinds of software development projects and succeed in achieving timely delivery and high-quality products. As well as an in-depth description of the important activities associated with a project and comprehensive coverage of the kinds of tasks which need to be achieved for different projects, this book also contains an extensive reference section containing a detailed description of each task, recommended techniques that provide support for accomplishing each task, a summary of the COMN Light Notation, a foreword by Ed Yourdon.

About the authors: Ian Graham is an internationally recognized authority on Object Technology and is the developer of the SOMA object-oriented method, which was the chief source for the OPEN process object model. He has over 20 years experience as a practitioner in the computing industry and is currently Vice President, Global Markets Technology, with the Chase Manhattan Bank. Ian was a founder member of the OPEN Consortium. His best-selling books, *Object Oriented Methods* and *Migrating to Object Technology*, are also published under the Addison-Wesley imprint. Brian Henderson-Sellers is Director of the Centre for Object Technology Applications and Research in Victoria, Australia. Professor of Computer Science, Object Technology, at Swinburne University and also a founder member of the OPEN Consortium. He is the author of *Object Oriented Metrics* and *A Book of Object Oriented Knowledge*, which introduced the fountain model that was the inspiration for OPEN's approach to reuse management. Brian is a regular contributor of articles to magazines and journals. Houman Younessi is an academic member of the School of Information Technology at Swinburne University of Technology and a member of the OPEN Consortium. Previously the Managing Director

of Australian Business Consultants Pty Ltd Housman is an internationally recognized consultant practitioner and educator specializing in organizational and information technology methods I'm delighted to see the work of the OPEN Consortium come to fruition represented by this book Graham Henderson Sellers and Younessi have done a marvelous job in coordinating and distilling the work of over two dozen OO methodologists and you have much to learn by digesting their explanation of this highly respectable third generation OO method I highly commend it to you Ed Yourdon Visit ACM Press and Addison Wesley Longman on the World Wide Web at <http://info.acm.org> <http://www.awl-he.com/computing> <http://www.awl.com> cseng other logos ACM logo and ACM 50th anniversary logo A W logo Addison Wesley Longman Limited Keyline for barcode
