Evaporation

On a warm, sunny day, a glass of water seems to slowly disappear. This is because the energy from the sun _____ the water and turns the liquid water into water _____. This process is called _____. When the water _____, it becomes a gas in the _____.

Condensation

As the water vapor rises, it cools off and _____ into water _____. If the water vapor becomes extremely cold, it will form ice crystals instead of water droplets. As the water droplets or ice crystals grow bigger and more numerous, they form _____.

Precipitation

If water droplets or ice crystals become too _____, they can't stay in the air. They _____. Water droplets precipitate as _____, sleet, hail, or _____.

Collection

This precipitation gathers into _____ and streams that flow down to the lakes and oceans. This is called _____. Not all of the water makes it back to the oceans and lakes right away. Some of it is used by animals and _____. Some is frozen into _____. Eventually, the animals and plants breathe the water out and the glaciers melt, releasing the water back into the water _____.

Carbon Cycle: Fill in the blanks

Photosynthesis		Respiration	ocean	Greenhouse
			glucose	

- Plants use CO₂ in the process of _____ to make _____ and oxygen.
- Animals use oxygen in the process of _____ and make more CO₂.
- The _____ is the main regulator of CO₂ in the atmosphere because CO₂ dissolves easily in it.
- In the past, huge deposits of carbon were stored as dead plants and animals _____.
- Today these deposits are burned as fossil fuels, which include _____, _____, and _____.
- More CO₂ is released in the atmosphere today than in the past because of the _____.
- Too much CO₂ in the atmosphere may be responsible for the _____ effect/global warming.

Biogeochemical Cycles Worksheet Doc:

Marine Geochemistry Roy Chester, 2009-04-01 The first edition of Marine Geochemistry received strong critical acclaim and the reviews included the comments that it provides a benchmark in the field and is clearly recognizable as a standard text for years to come. Marine Geochemistry offers a fully comprehensive and integrated treatment of the chemistry of the oceans, their sediments and biota. It addresses the fundamental question: How do the oceans work as a chemical system by capitalizing on the significant advances in understanding oceanic processes made over the past three decades. These advances have been facilitated by improved sampling and analytical techniques, a better understanding of theoretical concepts, and the instigation of large sized international oceanographic programs. Designed for use as a text, the book treats the oceans as a unified system in which material stored in the sea water, the sediment and the rock reservoirs interacts to control the composition of sea water itself. Part I covers the transport of material to the oceans via rivers, the atmosphere and hydrothermal systems and discusses their relative flux magnitudes. Part II considers the oceans as a reservoir introducing water column parameters before discussing water column fluxes and the benthic boundary layer. Part III is devoted to the sediment reservoir. The topics covered include diagenesis, the major components of the sediments and the processes controlling the geochemistry of oceanic deposit which are discussed in terms of sediment forming signals. Part IV offers an overview and synthesis of the integrated marine geochemical system. Since the publication of the first edition there have been further significant advances in several areas of the subject. The revised text of this edition accommodates these advances while still retaining the emphasis on identifying key processes operating within a unified ocean. Special attention has been paid to fundamental conceptual changes such as those related to trace metal speciation in sea water, hydrothermal activity, carbon dioxide and the importance of the oceans in world climate change, the transport of particulate material to the interior of the ocean, primary production and iron limitation, colloids and the preservation/destruction of organic matter in marine sediments. Intermediate and advanced students with interests in chemical oceanography, marine geochemistry, marine biology and environmental chemistry will welcome this revised comprehensive text. Other students in the broader field of earth sciences will find it to be an essential reference source dealing with the interaction between the atmosphere, the ocean and the solid earth. Incorporates all significant recent advances in the field. Unified system approach to ocean chemistry. Emphasises geological contexts e.g. sediment diagenesis.

Global biogeochemical cycles Butcher, 1992-08-12 Global biogeochemical cycles **Interactions of C, N, P, and S Biogeochemical Cycles and Global Change** R. Wollast, Fred T. Mackenzie, Lei Chou, 1993 This book is a natural extension of the SCOPE Scientific Committee of Problems on the Environment volumes on the carbon C, nitrogen N, phosphorus P and sulfur S biogeochemical cycles and their interactions.
