Lin,2012-12-06 Non linear stochastic systems are at the center of many engineering disciplines and progress in theoretical research had led to a better understanding of non linear phenomena This book provides information on new fundamental results and their applications which are beginning to appear across the entire spectrum of mechanics The outstanding points of these proceedings are Coherent compendium of the current state of modelling and analysis of non linear stochastic systems from engineering applied mathematics and physics point of view Subject areas include Multiscale phenomena stability and bifurcations control and estimation computational methods and modelling For the Engineering and Physics communities this book will provide first hand information on recent mathematical developments The applied mathematics community will benefit from the modelling and information on various possible applications *Mathematical Modeling*

Christof Eck,Harald Garcke,Peter Knabner,2017-04-11 Mathematical models are the decisive tool to explain and predict phenomena in the natural and engineering sciences With this book readers will learn to derive mathematical models which help to understand real world phenomena At the same time a wealth of important examples for the abstract concepts treated in the curriculum of mathematics degrees are given An essential feature of this book is that mathematical structures are used as an ordering principle and not the fields of application Methods from linear algebra analysis and the theory of ordinary and partial differential equations are thoroughly introduced and applied in the modeling process Examples of applications in the fields electrical networks chemical reaction dynamics population dynamics fluid dynamics elasticity theory and crystal growth are treated comprehensively **Nonlinear Computational Geometry** Ioannis Z. Emiris,Frank Sottile,Thorsten

Theobald,2009-10-28 An original motivation for algebraic geometry was to understand curves and surfaces in three dimensions Recent theoretical and technological advances in areas such as robotics computer vision computer aided geometric design and molecular biology together with the increased availability of computational resources have brought these original questions once more into the forefront of research One particular challenge is to combine applicable methods from algebraic geometry with proven techniques from piecewise linear computational geometry such as Voronoi diagrams and hyperplane arrangements to develop tools for treating curved objects These research efforts may be summarized under the term nonlinear computational geometry This volume grew out of an IMA workshop on Nonlinear Computational Geometry in May June 2007 organized by I Z Emiris R Goldman F Sottile T Theobald which gathered leading experts in this emerging field The research and expository articles in the volume are intended to provide an overview of nonlinear computational geometry Since the topic involves computational geometry algebraic geometry and geometric modeling the volume has contributions from all of these areas By addressing a broad range of issues from purely theoretical and algorithmic problems to implementation and practical applications this volume conveys the spirit of the IMA workshop
