Baayen,2008-03-06 Statistical analysis is a useful skill for linguists and psycholinguists allowing them to understand the quantitative structure of their data This textbook provides a straightforward introduction to the statistical analysis of language Designed for linguists with a non mathematical background it clearly introduces the basic principles and methods of statistical analysis using R the leading computational statistics programme The reader is guided step by step through a range of real data sets allowing them to analyse acoustic data construct grammatical trees for a variety of languages quantify register variation in corpus linguistics and measure experimental data using state of the art models The visualization of data plays a key role both in the initial stages of data exploration and later on when the reader is encouraged to criticize various models Containing over 40 exercises with model answers this book will be welcomed by all linguists wishing to learn more about working with and presenting quantitative data **An A-Z of Applied Linguistics Research Methods** Shawn

Loewen,Luke Plonsky,2017-09-16 Featuring an extensive set of entries covering all aspects of research methodology ranging from basic to more advanced topics this is an essential reference for applied linguists everywhere Explanations of key concepts and techniques are fully cross referenced and presented in bite sized chunks making it easy for users to look up specific terms quickly or have a brief refresher on methodological practices and related issues Concepts are further illustrated by real life examples drawn from current linguistics research This is ideal for undergraduate and postgraduate students studying applied linguistics or TESOL modules **Research Methods in Linguistics** Robert J. Podesva,Devyani

Sharma,2014-01-23 A comprehensive guide to conducting research projects in linguistics this book provides a complete training in state of the art data collection processing and analysis techniques The book follows the structure of a research project guiding the reader through the steps involved in collecting and processing data and providing a solid foundation for linguistic analysis All major research methods are covered each by a leading expert Rather than focusing on narrow specializations the text fosters interdisciplinarity with many chapters focusing on shared methods such as sampling experimental design transcription and constructing an argument Highly practical the book offers helpful tips on how and where to get started depending on the nature of the research question The only book that covers the full range of methods used across the field this student friendly text is also a helpful reference source for the more experienced researcher and current practitioner *Cluster Analysis for Corpus Linguistics* Hermann Moisl,2015-02-24 The standard scientific

methodology in linguistics is empirical testing of falsifiable hypotheses As such the process of hypothesis generation is

central and involves formulation of a research question about a domain of interest and statement of a hypothesis relative to it. In corpus linguistics the domain is text and generation involves abstraction of data from text data analysis and formulation of a hypothesis based on inference from the results. Traditionally this process has been paper based but the advent of electronic text has increasingly rendered it obsolete both because the size of digital corpora is now at or beyond the limit of what can efficiently be used in the traditional way and because the complexity of data abstracted from them can be impenetrable to understanding. Linguists are increasingly turning to mathematical and statistical computational methods for help and cluster analysis is such a method. It is used across the sciences for hypothesis generation by identification of structure in data which are too large or complex or both to be interpretable by direct inspection. This book aims to show how cluster analysis can be used for hypothesis generation in corpus linguistics thereby contributing to a quantitative empirical methodology for the discipline.

Data Visualization and Analysis in Second Language Research Guilherme D. Garcia, 2021-05-30 This introduction to visualization techniques and statistical models for second language research focuses on three types of data: continuous, binary, and scalar, helping readers to understand regression models fully and to apply them in their work. Garcia offers advanced coverage of Bayesian analysis, simulated data exercises, implementable script code, and practical guidance on the latest R software packages. The book also demonstrates the benefits to the L2 field of this type of statistical work, is a resource for graduate students and researchers in second language acquisition, applied linguistics, and corpus linguistics who are interested in quantitative data analysis.

Researching Subtitling Processes Anke Radinger, 2025-07-31 Subtitling is almost as old as the motion picture itself. It is a very specific form of translation that goes well beyond the transferring of written texts, given that the source text, the film, is a complex combination of spoken and written text together with dynamic images, music, and sounds. But how does one read a film in order to translate it? In this volume, Anke Radinger investigates what happens in a subtitler's mind, especially in various working environments. An example of one of these conditions is the introduction of innovative assistive language tools, such as AI-powered speech-to-text, into traditional subtitling workflows. Using methods like eye tracking and keylogging, Radinger reviews computer or rather AI-assisted subtitling processes, practices, and workflows while concentrating on aspects such as effort and quality. Her work is a valuable contribution to subtitling process research, SPR, a young and greatly under-researched subfield of audiovisual translation.

Applied Linguistics Li Wei, 2013-09-25 In this complete survey of the theories, methods, and key findings within applied linguistics, students are introduced to core research questions and the various approaches to tackling these. Provides a comprehensive introduction to this interdisciplinary field of research and practice, dealing with practical issues of language and communication. Takes a problem-solving approach, introducing students to key research questions and guiding them through the various ways of tackling these. Features additional study aids throughout, including chapter outlines, learning objectives, key terms, research questions, and answers, study questions, and recommended further readings. Enables students to identify

every day language and communication issues and to draw on their own personal experiences Edited by a leading figure in the field heading up an experienced and interdisciplinary team of contributors from the renowned department of applied linguistics at Birkbeck College University of London resulting in unique combination of knowledge skills and strength from scholars who teach and research together
