Analysis Of Dirac Systems And Computational Algebra Progress In Mathematical Physics:

Analysis of Dirac Systems and Computational Algebra Fabrizio Colombo, Irene Sabadini, Franciscus Sommen, Daniele C. Struppa, 2012-12-06 The main treatment is devoted to the analysis of systems of linear partial differential equations PDEs with constant coefficients focusing attention on null solutions of Dirac systems All the necessary classical material is initially presented Geared toward graduate students and researchers in hyper complex analysis Clifford analysis systems of PDEs with constant coefficients and mathematical physics *Michele Sce's Works in Hypercomplex Analysis* Fabrizio Colombo, Irene Sabadini, Daniele C. Struppa, 2020-10-24 This book presents English translations of Michele Sce s most important works originally written in Italian during the period 1955 1973 on hypercomplex analysis and algebras of hypercomplex numbers Despite their importance these works are not very well known in the mathematics community because of the language they were published in Possibly the most remarkable instance is the so called Fueter Sce mapping theorem which is a cornerstone of modern hypercomplex analysis and is not yet understood in its full generality This volume is dedicated to revealing and describing the framework Sce worked in at an exciting time when the various generalizations of complex analysis in one variable were still in their infancy In addition to faithfully translating Sce s papers the authors discuss their significance and explain their connections to contemporary research in hypercomplex analysis They also discuss many concrete examples that can serve as a basis for further research The vast majority of the results presented here will be new to readers allowing them to finally access the original sources with the benefit of comments from fellow mathematicians active in the field of hypercomplex analysis As such the book offers not only an important chapter in the history of hypercomplex analysis but also a roadmap for further exciting research in the field **Hypercomplex Analysis and Applications** Irene Sabadini, Franciscus Sommen, 2010-12-20 The purpose of the volume is to bring forward recent trends of research in hypercomplex analysis The list of contributors includes first rate mathematicians and young researchers working on several different aspects in quaternionic and Clifford analysis Besides original research papers there are papers providing the state of the art of a specific topic sometimes containing interdisciplinary fields The intended audience includes researchers PhD students postgraduate students who are interested in the field and in possible connection between hypercomplex analysis and other disciplines including mathematical analysis mathematical physics algebra **Hypercomplex Analysis** Irene Sabadini, Michael Shapiro, Franciscus Sommen, 2009-04-21 Contains selected papers from the ISAAC conference 2007 and invited contributions This book covers various topics that represent the main streams of research in hypercomplex analysis as well as the expository articles It is suitable for researchers and postgraduate students in various areas of mathematical analysis *Recent Developments in Operator Theory, Mathematical Physics and Complex Analysis* Daniel Alpay, Jussi Behrndt, Fabrizio Colombo, Irene Sabadini, Daniele C. Struppa, 2023-04-11 This book features a collection of papers by plenary semi plenary and invited contributors at IWOTA2021 held at Chapman University in hybrid

format in August 2021 The topics span areas of current research in operator theory mathematical physics and complex analysis *Complex Analysis and Dynamical Systems VI* Lawrence Zalcman, 2016-05-19 This volume contains the proceedings of the Sixth International Conference on Complex Analysis and Dynamical Systems held from May 19-24 2013 in Nahariya Israel in honor of David Shoikhet's sixtieth birthday The papers range over a wide variety of topics in complex analysis quasiconformal mappings and complex dynamics Taken together the articles provide the reader with a panorama of activity in these areas drawn by a number of leading figures in the field They testify to the continued vitality of the interplay between classical and modern analysis The companion volume *Contemporary Mathematics Volume 653* is devoted to partial differential equations differential geometry and radon transforms **Modern Trends in Hypercomplex Analysis** Swanild Bernstein, Uwe Kähler, Irene Sabadini, Franciscus Sommen, 2016-11-21 This book contains a selection of papers presented at the session Quaternionic and Clifford Analysis at the 10th ISAAC Congress held in Macau in August 2015 The covered topics represent the state of the art as well as new trends in hypercomplex analysis and its applications Spectral Theory, Mathematical System Theory, Evolution Equations, Differential and Difference Equations Wolfgang Arendt, Joseph A. Ball, Jussi Behrndt, Karl-Heinz Förster, Volker Mehrmann, Carsten Trunk, 2012-06-15 The present volume contains a collection of original research articles and expository contributions on recent developments in operator theory and its multifaceted applications They cover a wide range of themes from the IWOTA 2010 conference held at the TU Berlin Germany including spectral theory function spaces mathematical system theory evolution equations and semigroups and differential and difference operators The book encompasses new trends and various modern topics in operator theory and serves as a useful source of information to mathematicians scientists and engineers Mathematicians in Bologna 1861-1960 Salvatore COEN, 2012-05-11 The scientific personalities of Luigi Cremona Eugenio Beltrami Salvatore Pincherle Federigo Enriques Beppo Levi Giuseppe Vitali Beniamino Segre and of several other mathematicians who worked in Bologna in the century 1861-1960 are examined by different authors in some cases providing different view points Most contributions in the volume are historical they are reproductions of original documents or studies on an original work and its impact on later research The achievements of other mathematicians are investigated for their present day importance **Multidimensional Residue Theory and Applications** Alekos Vidras, Alain Yger, 2023-10-18 Residue theory is an active area of complex analysis with connections and applications to fields as diverse as partial differential and integral equations computer algebra arithmetic or diophantine geometry and mathematical physics Multidimensional Residue Theory and Applications defines and studies multidimensional residues via analytic continuation for holomorphic bundle valued current maps This point of view offers versatility and flexibility to the tools and constructions proposed allowing these residues to be defined and studied outside the classical case of complete intersection The book goes on to show how these residues are algebraic in nature and how they relate and apply to a wide range of situations most notably to membership problems such as the Brian on Skoda

theorem and Hilbert's Nullstellensatz to arithmetic intersection theory and to tropical geometry. This book will supersede the existing literature in this area which dates back more than three decades. It will be appreciated by mathematicians and graduate students in multivariate complex analysis. But thanks to the gentle treatment of the one-dimensional case in Chapter 1 and the rich background material in the appendices it may also be read by specialists in arithmetic diophantine or tropical geometry as well as in mathematical physics or computer algebra.
