Basak, 2012-06-26 Explore the multidisciplinary nature of complex networks through machine learning techniques Statistical and Machine Learning Approaches for Network Analysis provides an accessible framework for structurally analyzing graphs by bringing together known and novel approaches on graph classes and graph measures for classification By providing different approaches based

on experimental data the book uniquely sets itself apart from the current literature by exploring the application of machine learning techniques to various types of complex networks Comprised of chapters written by internationally renowned researchers in the field of interdisciplinary network theory the book presents current and classical methods to analyze networks statistically Methods from machine learning data mining and information theory are strongly emphasized throughout Real data sets are used to showcase the discussed methods and topics which include A survey of computational approaches to reconstruct and partition biological networks An introduction to complex networks measures statistical properties and models Modeling for evolving biological networks The structure of an evolving random bipartite graph Density based enumeration in structured data Hyponym extraction employing a weighted graph kernel Statistical and Machine Learning Approaches for Network Analysis is an excellent supplemental text for graduate level cross disciplinary courses in applied discrete mathematics bioinformatics pattern recognition and computer science The book is also a valuable reference for researchers and practitioners in the fields of applied discrete mathematics machine learning data mining and biostatistics

Analyzing the Large Number of Variables in Biomedical and Satellite Imagery Phillip I. Good,2011-05-18 This book grew out of an online interactive offered through statcourse com and it soon became apparent to the author that the course was too limited in terms of time and length in light of the broad backgrounds of the enrolled students The statisticians who took the course needed to be brought up to speed both on the biological context as well as on the specialized statistical methods needed to handle large arrays Biologists and physicians even though fully knowledgeable concerning the procedures used to

generate microarrays EEGs or MRIs needed a full introduction to the resampling methods the bootstrap decision trees and permutation tests before the specialized methods applicable to large arrays could be introduced As the intended audience for this book consists both of statisticians and of medical and biological research workers as well as all those research workers who make use of satellite imagery including agronomists and meteorologists the book provides a step by step approach to not only the specialized methods needed to analyze the data from microarrays and images but also to the resampling methods step down multi comparison procedures multivariate analysis as well as data collection and pre processing While many alternate techniques for analysis have been introduced in the past decade the author has selected only those techniques for which software is available along with a list of the available links from which the software may be purchased or downloaded without charge Topical coverage includes very large arrays permutation tests applying permutation tests gathering and preparing data for analysis multiple tests bootstrap applying the bootstrap classification methods decision trees and applying decision trees
