Analyzing Interactions in CSCL Sadhana Puntambekar, Gijsbert Erkens, Cindy Hmelo-Silver, 2011-01-11 Analyzing Interactions in CSCL Methodology Approaches and Issues deepens the understanding of ways to document and analyze interactions in CSCL and informs the design of the next generation of CSCL tools It provides researchers with several alternative methodologies theoretical underpinnings of the methods used data indicating how the method worked guidance for using the methods implications for understanding collaborative processes and their effect on learning outcomes and implications for design CSCL research tends to span across several disciplines such as education psychology computer science and artificial intelligence As a result the methods for data collection and analysis are interdisciplinary from fields such as sociology anthropology psychology computer science and artificial intelligence This book brings perspectives together and provides researchers with an array of methodologies to document and analyze collaborative interactions

Analyzing Interactions in CscI Sadhana Puntambekar, Gijsbert Erkens, Cindy Hmelo-Silver, 2011-03-30 The International Handbook of Collaborative Learning Cindy E. Hmelo-Silver, 2013 Collaborative learning has become an increasingly important part of education but the research supporting it is distributed across a wide variety of fields This book aims to integrate this theory and research and to forward our understanding of collaborative learning and its instructional applications

Productive Multivocality in the Analysis of Group Interactions Daniel D. Suthers, Kristine Lund, Carolyn Penstein Rosé, Chris Teplov, Nancy Law, 2013-12-02 The key idea of the book is that scientific and practical advances can be obtained if researchers working in traditions that have been assumed to be mutually incompatible make a real effort to engage in dialogue with each other comparing and contrasting their understandings of a given phenomenon and how these different understandings can either complement or mutually elaborate on each other This key idea applies to many fields particularly in the social and behavioral sciences as well as education and computer science The book shows how we have achieved this by presenting our study of collaborative learning during the course of a four year project Through a series of five workshops involving dozens of researchers the 37 editors and authors involved in this project studied and reported on collaborative learning technology enhanced learning and cooperative work The authors share an interest in understanding group interactions but approach this topic from a variety of traditional disciplinary homes and theoretical and methodological traditions This allows the book to be of use to researchers in many different fields and with many different goals and agendas

Computer Support Collaborative Learning Practices Claire O'Malley, 2009-01-01 **Studying Virtual Math Teams** Gerry Stahl, 2010-05-03 Studying Virtual Math Teams centers on detailed empirical studies of how students in small online groups make sense of math issues and how they solve problems by making meaning together These studies are woven together with materials that describe the online environment and pedagogical orientation as well as reflections on the theoretical implications of the findings in the studies The nature of group cognition and shared meaning making in

collaborative learning is a foundational research issue in CSCL. More generally, the theme of sense making is a central topic in information science. While many authors allude to these topics, few have provided this kind of detailed analysis of the mechanisms of intersubjective meaning making. This book presents a coherent research agenda that has been pursued by the author and his research group. The book opens with descriptions of the project and its methodology as well as situating this research in the past and present context of the CSCL research field. The core research team then presents five concrete analyses of group interactions in different phases of the Virtual Math Teams research project. These chapters are followed by several studies by international collaborators discussing the group discourse, the software affordances, and alternative representations of the interaction, all using data from the VMT project. The concluding chapters address implications for the theory of group cognition and for the methodology of the learning sciences. In addition to substantial introductory and concluding chapters, this important new book includes analyses based upon the author's previous research, thereby providing smooth continuity and an engaging flow that follows the progression of the research. The VMT project has dual goals: a) to provide a source of experience and data for practical and theoretical explorations of group knowledge building, and b) to develop an effective online environment and educational service for collaborative learning of mathematics. Studying Virtual Math Teams reflects these twin orientations, reviewing the intertwined aims and development of a rigorous science of small group cognition and a Web 2.0 educational math service. It documents the kinds of interactional methods that small groups use to explore math issues and provides a glimpse into the potential of online interaction to promote productive math discourse.

ePedagogy in Online Learning: New Developments in Web Mediated Human Computer Interaction

McKay, Elspeth, 2013-03-31. ICT tools and the digital age continue to redefine teaching strategies for both the corporate sector and educational institutions. These teaching environments have enabled openness and interaction in order to teach communities to flourish. ePedagogy in Online Learning: New Developments in Web Mediated Human Computer Interaction provides approaches on adopting interactive web tools that promote effective human computer interaction in educational practices. This book is a vital tool for educational technology practitioners and researchers interested in incorporating e-learning practices in the education sector.

Theoretical Investigations Gerry Stahl, 2021-04-23. Computers have transformed how we think, discuss, and learn as individuals in groups within cultures and globally. However, social media are problematic, fostering flaming culture wars and fake news. This volume presents an alternative paradigm for computer support of group thinking, collaborative learning, and joint knowledge construction. This requires expanding concepts of cognition to collectivities like collaborative groups of networked students. Theoretical Investigations explores the conditions for group cognition, supplying a philosophical foundation for new models of pedagogy and methods to analyze group interaction. Twenty-five self-contained investigations document progress in research on computer-supported collaborative learning. CSCL, both in Stahl's own research and during the first decade of the CSCL journal. The volume begins with two new

reflections on the vision and theory that result from this research Representing both ethnomethodological and social constructivist research paradigms the investigations within this volume comprise a selection of seminal and influential articles and critical commentaries that contribute to an understanding of concepts and themes central to the CSCL field The book elaborates an innovative theory of group cognition and substantiates the pedagogical potential of CSCL Theoretical Investigations Philosophical Foundations of Group Cognition is essential as a graduate text for courses in educational theory instructional design learning and networked technologies The investigations will also appeal to researchers and practitioners in those areas Advances in Web Based Learning - ICWL 2009 Marc Spaniol, Qing Li, Ralf Klammer, Rynson W.
