Emerging Technologies and Interaction in Architecture Design Ziqi Wang, 2022 Architecture constantly absorbs and integrates emerging technologies for innovation In the massive resource era emerging technologies such as artificial intelligence and big data are affecting and changing our daily lives giving people more opportunities to obtain information Advanced 3D printing manufacturing and robotics are transforming how we live work do business practice research and engage with our communities Additionally it is changing how computation visualization material intelligence and fabrication technologies have begun to alter design construction and creation from the nano to macro scales The development and advancement of these emerging technologies inspired architects to think about how to distribute design networks and microfactories to next generation methods for adaptive low cost efficient sustainable fabrication and construction strategies Architects have never stopped trying to integrate emerging technology into

architecture At the beginning of the 20th century Le Corbusier advocated that architecture should learn from transportation He appreciated the high integration of technology and space in automobiles and airplanes and believed that the house is a machine for living in Later Avant Garde architects Archigram imagined the architecture and urban utopia of the future machine age taking buildings as a whole to adapt to the environment in their famous urban visions of Walking city Plug in city and Computer City These imagined environments allow architects to embrace science art and technology as a whole allowing them to think about the future versions of architecture These attempts not only have an impact on the construction of the architecture itself but also have an impact on the interactive relationship between architecture people and the environment While exploring the combination of new technologies into the discipline architects are also exploring the relationship between architecture and users and architecture and the context In the process of interaction between creation and influence various subtle relationships are formed between the space and people For architects new technologies could be used in design are sufficient but the creative integration of existing technologies into buildings is lacking In order to better integrate these latest technologies into future buildings we must not only understand the emerging technologies themselves but also have a deep understanding of the logic behind the technologies and have clear theories of the interactive relationship between technology people and the environment There are three aspects from the macro to the micro to creatively integrate existing technology into architectural design They are as follows the interaction with the environment which means the harmony between the architecture and the surrounding humanistic community environment the interaction with the space how to make the architectural space better serve users and interact with behaviors and how buildings can better respond and influence users behaviors This article will be in conjunction with my project at Cornell MS AAD to illustrate how to integrate emerging technology applications into architecture in terms of environmental interaction spatial interaction and behavioral interaction

Biomimetics for Architecture & Design Göran Pohl, Werner Nachtigall, 2015-10-30 This book provides the readers with a timely guide to the application of biomimetic principles in architecture and engineering design As a result of a combined effort by two internationally recognized authorities the biologist Werner Nachtigall and the architect Göran Pohl the book describes the principles which can be used to compare nature and technology and at the same time it presents detailed explanations and examples showing how biology can be used as a source of inspiration and translated in building and architectural solutions biomimicry Even though nature cannot be directly copied the living world can provide architects and engineers with a wealth of analogues and inspirations for their own creative designs But how can analysis of natural entities give rise to advanced and sustainable design By reporting on the latest bionic design methods and using extensive artwork the book guides readers through the field of nature inspired architecture offering an extraordinary resource for professional architects engineers designers and urban planners as well as for university teachers researchers and students Natural

evolution is seen throughout the book as a powerful resource that can serve architecture and design by providing innovative optimal and sustainable solutions
