Control Loop Foundation Terrence L. Blevins, Mark Nixon, 2011 In this in depth book the authors address the concepts and terminology that are needed to work in the field of process control The material is presented in a straightforward manner that is independent of the control system manufacturer It is assumed that the reader may not have worked in a process plant environment and may be unfamiliar with the field devices and control systems Much of the material on the practical aspects of control design and process applications is based on the authors personal experience gained in working with process control systems Thus the book is written to act as a guide for engineers managers technicians and others that are new to process control or experienced control engineers who are unfamiliar with multi loop control techniques After the traditional single loop and multi loop techniques that are most often used in industry are covered a brief introduction to advanced control techniques is provided Whether the reader of this book is working as a process control engineer working in a control group or working in an instrument department the information will set the solid foundation needed to understand and work with existing control systems or to design new control applications At various points in the chapters on process characterization and control design the reader has an opportunity to apply what was learned using web based workshops The only items required to access these workshops are a high speed Internet connection and a web browser Dynamic process simulations are built into the workshops to give the reader a realistic hands on experience Also one chapter of the book is dedicated to techniques that may be used to create process simulations using tools that are commonly available within most distributed control systems At various points in the chapters on process characterization and control design the reader has an opportunity to apply what was learned using web based workshops The only items required to access these workshops are a high speed Internet connection and a web browser Dynamic process simulations are built into the workshops to give the reader a realistic hands on experience Also one chapter of the book is dedicated to techniques that may be used to create process simulations using tools that are commonly available within most distributed control systems As control techniques are introduced simple process examples are used to illustrate how these techniques are applied in industry The last chapter of the book on process applications contains several more complex
