Regression Analysis

INTRODUCTION

The APA provides guidelines for creating tables for many types of statistical analyses that can be performed using SAS. Space does not permit explaining how to produce tables for all types of analyses, and this paper focuses on one of the most common statistical methods, linear regression. The APA format for regression analysis results is shown in Figure 1 (Nichol 2010).

Note. $R^2 = .58$ ($N = 68$, $p < .001$). CI = confidence interval for *B*.

Figure 1. APA-style Table Layout for Regression Analysis Results

Although regression analysis can be performed using the REG, GLM, MIXED and GLIMMIX procedures, this paper focuses on creating the table in Figure 1 using PROC REG. You can create this table using word processing software such as Microsoft Word, but copying and pasting the result values from the REG procedure output to Microsoft Word is both laborious and prone to error. Instead, we programmatically create a table that closely matches the APA style and requires minimal editing.

McKinney, 2025-07-24 Applied Multiple Regression Correlation Analysis for Aviation Research describes and illustrates multiple regression correlation MRC analysis in an aviation context including flight instruction, airport design, airline routes and aviation human factors research. Structured in four parts, the book first reviews the major concepts of bivariate correlation and regression and then extends the bivariate case to two, four and k predictors, coupled with discussions on statistical inference, underlying assumptions and regression diagnostics relative to MRC analysis. The book then builds on this foundation by presenting MRC variable selection strategies, simultaneous hierarchical and statistical regression, analyzing sets of predictors and introducing coding strategies for nominal predictors. The book concludes by presenting how MRC can be used to conduct an analysis of covariance, ANCOVA, interactions, mediation analysis and binary logistic regression. Throughout the presentation, the book provides a balance between procedural knowledge as well as conceptual understanding. Detailed guided examples are presented at the end of each chapter that apply the topics and concepts of the chapter from the perspective of conducting a research study. The analytic strategies demonstrated via these guided examples are clearly explained, enabling readers to understand, conduct and report results correctly. Pedagogical features associated with each chapter include a set of student learning outcomes and an end of chapter package that consists of a summary of the chapter's main topics, concepts, a list of key terms and review exercises including multiple choice items and a research scenario with data for students to analyze. Tailored to the needs of aviation students, *Applied Multiple Regression Correlation Analysis for Aviation Research* is the ideal textbook for research oriented graduate aviation programs such as a thesis based master's degree or doctoral program that require knowledge of advanced statistical strategies for analyzing research data. *IBM SPSS Statistics 26 Step by Step* Darren George, Paul Mallery, 2019-12-06 *IBM SPSS Statistics 26 Step by Step* A Simple Guide and Reference, sixteenth edition, takes a straightforward step by step approach that makes SPSS software clear to beginners and experienced researchers alike. Exercises at the end of each chapter support students by providing additional opportunities to practice using SPSS. This book covers the basics of statistical analysis and

addresses more advanced topics such as multi dimensional scaling factor analysis discriminant analysis measures of internal consistency MANOVA between and within subjects cluster analysis Log linear models logistic regression and a chapter describing residuals Back matter includes a description of data files used in exercises an exhaustive glossary suggestions for further reading and a comprehensive index
