

## Initial Start-Up

For absolute maximum protection, please follow and review the following important start-up steps:

### Inspection

Inspect the UPS upon receipt. Notify the vendor and dealer of there is damage. The packaging is recyclable; send it to the dealer or dispose of it properly.

### Placement

Install the UPS in a protected area that is free of moisture and dust and has adequate air flow. The unit operates the UPS where the temperature and humidity is outside the operating limits.

**Warning:** A licensee or modification to this unit not explicitly approved by the party responsible for compliance could void the warranty.

### Installation

To install the UPS, please follow the installation instructions in the Smart-UPS Quick Reference Guide.

This UPS is equipped with a Sensor Pilot for connectivity. See the APC Website (www.apc.com) for available accessories.

### Check the Site Wiring Fault Indicator

**Caution:** If the site wiring fault indicator lights, get a qualified electrician to correct the building wiring.

### Change the battery

The UPS charges its battery whenever it is connected to utility power. The battery will charge fully during the first 4 hours of normal operation. Do not expect full runtime during this initial charge period.

## Operating Instructions

Switch On — Switch Off

With the UPS plugged in, press and release the large power button located on the right side of the front panel. The loads are immediately powered while the UPS continues to charge.

Press and release the small, lower-off button to turn off power to the loads. It may be convenient to use the UPS as a power source for the protected equipment.

**Notes:** Whenever the UPS is plugged in and utility voltage is present, the charge maintenance battery charge.

The on-line LED illuminates when the UPS is supplying utility power to the loads.

### Self-test

The UPS performs a self-test automatically when turned on, and tests two ways (manual or automatic). Automatic self-test occurs immediately after connecting the load for periodic, manual self-test.

During the self-test, the UPS briefly operates the loads on battery. If the UPS passes the self-test, it returns to on-line operation.

If the UPS fails the self-test immediately after it attempts to return to on-line and lights the replace battery LED.

The load can not be turned by a failed test. Recharge the battery overnight and perform the self-test again. If the replace battery LED is still on, replace the battery using the Replacing the Battery procedure.

### SmartPilot

The SmartPilot LED comes on or indicates that the UPS is compensating for a low voltage.

### SmartBoost

The SmartBoost LED comes on to indicate that the UPS is compensating for a low voltage.

## Rear Views

Power management software and interface kits can be used with the UPS. The only kit application approved by the manufacturer.

Connect the interface cable to the "Data connector" interface port on the back panel of the UPS. Secure the connector's screws to complete the connection.

### Connect Ground Leads to TNX8 Connector (Optional)

The UPS features a TNX8 connector for connecting the ground lead on transfer voltage range converter (TVSS) device such as telephones and network line protectors. The TNX8 connector provides grounding through the UPS's power and ground conductors. To make a connection to the TNX8 connector, loose the screw and connect the large suspension screw's ground lead. Tighten the screw to secure the lead.

### Battery Pack Connector (2000 VA only)

Use the battery pack connector to connect the optional external battery pack.

## On Battery

During on-battery operation, the on-battery LED illuminates and the UPS sounds an audible alarm consisting of four beeps every 10 seconds. The alarm stops when the UPS returns to on-line operation.

### Low Battery

When the UPS is operating on battery and the charge reserve of the battery is low, the UPS's battery reserve level (BRL) LED shows down from battery illumination of power to on-line operation.

### Battery Charge Bar Graph

The 5-L-LED display on the right of the front panel shows the present charge of the UPS's battery as a percentage of the battery's capacity. When all five LEDs light, the battery is fully charged. The top LED goes out whenever the battery is not 100% charged. When the LEDs are flashing, the battery can supply load for 60+ hour battery warning before it goes low for the load.

### Shutdown Mode

If there is no utility power present, a host system connected to the computer interface port can command the UPS to shut down. This is normally done to preserve battery capacity after a controlled shutdown of the protected system. In shutdown mode, the UPS does nothing but provide for the load, making for the most of battery power.

The UPS sends the front panel indicator sequentially in shutdown mode. If the UPS has shutdown due to low battery, the UPS lights the Battery Charge Bar Graph only. When the power is restored, the UPS returns to on-line operation.

## Replace Battery

If the battery fails a self-test, the UPS sends short beeps for one minute and the replace battery LED illuminates. The UPS requires the owner-operate fire button. Therefore the self-test procedure to confirm replace battery condition. The alarm stops when the battery returns to on-line and.

### Load Bar Graph

The 5-L-LED display on the left of the front panel shows the load or draws from the UPS by the load. The display indicates the percentage of the UPS's rated capacity. For example, if three LEDs are lit, the load is drawing between 25% and 75% of the UPS's capacity. If all five LEDs light, the load is not more complete capacity to make sure that the UPS must not become overloaded.

## Voltage Sensitivity

The UPS detects line voltage deviations such as sags, swells, dips, and surges, as well as abnormal conditions for equipment with sensitive load-powered processors. By default, the UPS sends no-alarm by transferring to on-battery operation to protect the loads. When power quality is poor, the UPS may temporarily lower the line-voltage regulation. If the loads can operate normally under such conditions, battery charging and conversion may be corrected by restoring the sensitivity of the UPS.

To reduce UPS sensitivity, press the configuration button on the rear panel. Use a pointed object such as a pen to press the button. Press it again to set the UPS's sensitivity to Offload. Press it again to set the sensitivity to On. Press the button a third time to turn manual sensitivity.

When the UPS is set to manual sensitivity, the configuration LED is lit. When it is set to voltage regulation, the LED is lit. When it is set to low sensitivity, the LED is off.

## Low Battery Warning Interval

By default, the low battery warning interval when there are approximately two minutes of no-battery run time remaining. This interval can be changed to approximately 10 minutes when power is present.

To change the warning interval, press the rear panel configuration button while pressing and holding the Stop/Reset button.

Press the configuration button once to set the low battery warning interval to approximately 10 minutes. Press it again to set the interval to approximately 2 minutes. Press the button a third time to set the interval to the default.

## Overload

When loads exceed the UPS's capacity, the overload LED illuminates. The UPS sends a continuous tone, and the input circuit breaker may trip the immediate owner change of the circuit breaker prior to it. The owner continues to reset the circuit breaker to eliminate the overload. If there is AC power and the circuit breaker does not trip during overload, the loads are still powered. If the circuit breaker trips and the UPS attempts to go on-battery, the output AC will shut down.

### Cold Start

When the UPS is off and there is no utility power, it is possible to cold start the UPS to power the loads from the UPS's battery.

**Caution:** Cold start is not a recommended condition.

Press and hold the control button and the UPS begins beeping.

Release the control button during the beeping to start the UPS.

### Utility Voltage Bar Graph

The UPS has a display feature that displays the utility voltage. With the UPS plugged into the manual utility power, press and hold the control button to see the utility voltage bar graph display. After approximately four seconds the 5-L-LED display on the right of the front panel shows the utility voltage. 100% is the display below the bar graph display.

The display indicates that the voltage is between the displayed value (the bar) and the next higher value. For example, with three LEDs lit, the input voltage is between 110 and 125 VAC. If the LEDs come on and the UPS is plugged into a working AC power source, the line voltage is extremely low.

If all five LEDs come on, the line voltage is extremely high and should be checked by an electrician.

**Notes:** The UPS starts a self-test as part of the procedure. The self-test does not affect the voltage display.

## Storage

### Storage Conditions

Store the UPS covered and upright in a cool, dry location, with its battery fully charged. Before storing, charge the UPS for at least 4 hours. Disconnect any cables connected to the computer interface port to avoid unnecessarily draining the battery.

### Extended storage

- At 20 to 30 °C (68 to 86 °F), charge the UPS's battery every 6 months.
- At 10 to 40 °C (50 to 104 °F), charge the UPS's battery every 3 months.
