Apoptosis The Life And Death Of Cells Developmental Cell Biology:

Apoptosis Christopher Potten, James Wilson, 2004-08-16 This book describes the biological implications and significance of apoptosis Occurring naturally throughout the lifetime of most multicellular organisms apoptosis or programmed cell death accounts for the continuous turnover of cells in the body However the genes regulating apoptosis are defective in many cancers

The Oncogenomics Handbook William J. LaRochelle, Richard A. Shimkets, 2007-11-09 An integrated overview of cancer drug discovery and development from the bench to the clinic showing with broad strokes and representative examples the drug development process as a network of linked components leading from the discovered target to the ultimate therapeutic product Following a systems biology approach the authors explain genomic databases and how to discover oncological targets from them how then to advance from the gene and transcript to the level of protein biochemistry how next to move from the chemical realm to that of the living cell and ultimately pursue animal modeling and clinical development Emerging cancer therapeutics including Rituxan Erbitux Gleevec Herceptin Avastin ABX EGF Velcade Kepivance Iressa Tarceva and Zevalin are addressed Highlights include cancer genomics pharmacogenomics transcriptomics gene expression analysis proteomic and enzymatic cancer profiling technologies and cellular and animal approaches to cancer target validation

Cell Death Gerry Melino, David Vaux, 2010-02-22 This book on cell death contains 29 self contained peer reviewed articles written by leading scientists in each field It features overview articles aimed at undergraduates and non specialists which present basic information and provide entry into the following advanced articles These advanced articles are written for postgraduate students and research workers containing detailed information and key references allowing the reader to investigate a specific area in more depth The book is an essential resource for educational purposes as well as a reference work for experienced researchers in the field The articles will also be available electronically as part of the acclaimed Encyclopedia of Life Sciences ELS Key features Provides a comprehensive overview on the research of programmed cell death Edited by leaders in the field Clearly written and illustrated articles Full colour throughout A spin on to the acclaimed reference work the Encyclopedia of Life Science ELS Combines introductory information with coverage of the latest discoveries in the field Features overview level articles for advanced students or people new to a topic and more advanced articles for those requiring more detailed information Serves as a reference work for advanced students as well as researchers in this field Ideal library purchase for science medical and technology libraries in academia government and industry medical libraries networks and consortia covering these markets

Life: The Science of Biology: Volume IV William K. Purves, Gordon H. Orians, David Sadava, H. Craig Heller, 2003-12-08 This is an authoritative introductory text that presents biological concepts through the research that revealed them Life covers the full range of topics with an integrated experimental focus that flows naturally from the narrative

Disease Progression and Carcinogenesis in the Gastrointestinal Tract P.R. Galle, G. Gerken, W.E. Schmidt, B. Wiedenmann, 2003-09-30 Development and progression of

gastrointestinal disease involves inflammatory vascular fibrogenetic and immune reactions accompanied by deregulation of cellular growth and death often resulting in cancer of the organs affected This book the proceedings of Falk Symposium 132 on Disease Progression and Carcinogenesis in the Gastrointestinal Tract held in Freiburg Germany October 9 10 2002 addresses these various cellular processes in five sections in order to build up a broad pathogenic concept of gastrointestinal disease purposely going beyond organ specific research Each section combines experts in the various fields of molecular medicine together with clinical scientists in order to stimulate interdisciplinary discussion In addition clinical chapters focus on new findings in both diagnostics and therapeutics Developmental Toxicology Deborah K. Hansen, Barbara D.

Abbott, 2008-10-22 Highlighting latest advances in genetics and biochemistry the completely revised Third Edition reviews the field from basic science clinical epidemiological and regulatory perspectives Contributions from top opinion leaders in the field bring together developments in molecular embryology and cell biology as they apply to problems in developmental toxicology It covers testing of pharmaceutical and environmental agents and interpretation of developmental toxicology data highlighting mathematical and statistical techniques as well as the effects of toxic exposure on the functional development of various organs The relationship between maternal and developmental toxicology is examined in addition to current techniques for studying chemical disposition metabolism and placental transfer Close attention is given to the regulatory aspects of testing and risk assessment Pre and postconceptional clinical care and genetic factors in clinical developmental toxicology are also discussed Key topics include the roles of apoptosis and signal transduction pathways in normal and abnormal development the role of epigenetic changes in development the role of nutrition and individual susceptibility the utility of bioinformatics global and targeted gene expression changes **Handbook of Developmental Neurotoxicology**

William Slikker Jr., Louis W. Chang, 1998-08-10 The Handbook of Developmental Neurotoxicology provides a comprehensive account of the impacts mechanisms and clinical relevances of chemicals on the development of the nervous system The book is written by internationally recognized experts on developmental neurotoxicology covering subjects from basic neuro development to toxic syndromes induced by various chemicals It is an important text for both students and professionals who are interested in developmental neurobiology and neurotoxicology Written by internationally recognized experts on developmental neurotoxicology Includes extensive references Well illustrated with diagrams charts and tables Provides coverage of basic neurobiology as well as neurotoxicology **Cell Engineering** Mohamed Al-Rubeai, 2007-11-23 Integrating

advances in molecular biology into bioprocesses presents a continuous challenge to scientists and bioengineers This series is conceived to help meet this challenge It examines and assesses the feasibility of new approaches for the modification of cellular function such as gene expression protein processing secretion glycosylation immortalisation proliferation and apoptosis as well as the systematic study of the metabolic genotype phenotype relationship The series provides detailed coverage of the methodology for improving cellular properties of cells used in the production of biopharmaceuticals gene and

cell therapies and tissue engineering It also seeks to explain the cellular mechanisms underlying in vitro physiological activity and productivity This volume which is based on presentations at the European Workshop on Animal Cell Engineering held in Costa Brava Spain contains a collection of chapters relating to cellular function and modification by leading authorities in several different areas of basic research and the biopharmaceutical industry *The Role of Microtubules in Cell Biology, Neurobiology, and Oncology* Antonio Tito Fojo, 2009-01-14 This book presents the first comprehensive exploration of the dynamic potential of microtubules anti cancer targets Written by leading anti cancer researchers this groundbreaking volume collects the most current microtubule research available and investigates the potential of microtubules in cancer therapy Hayes' Principles and Methods of Toxicology, Sixth Edition A. Wallace Hayes, Claire L. Kruger, 2014-10-10 Hayes Principles and Methods of Toxicology has long been established as a reliable reference to the concepts methodologies and assessments integral to toxicology The new sixth edition has been revised and updated while maintaining the same high standards that have made this volume a benchmark resource in the field With new authors and new chapters that address the advances and developments since the fifth edition the book presents everything toxicologists and students need to know to understand hazards and mechanisms of toxicity enabling them to better assess risk The book begins with the four basic principles of toxicology dose matters people differ everything transforms and timing is crucial The contributors discuss various agents of toxicity including foodborne solvents crop protection chemicals radiation and plant and animal toxins They examine various methods for defining and measuring toxicity in a host of areas including genetics carcinogenicity toxicity in major body systems and the environment This new edition contains an expanded glossary reflecting significant changes in the field New topics in this edition include The importance of dose response Systems toxicology Food safety The humane use and care of animals Neurotoxicology The comprehensive coverage and clear writing style make this volume an invaluable text for students and a one stop reference for professionals
