A Notable Occupation:

Human Occupation Ted Brown, Stephen Isbel, Louise Gustafsson, Sharon Gutman, Diane Powers Drette, Bethan Collins, Tim Barlott, 2024-09-17 This comprehensive textbook provides occupational therapy and science students and practitioners with a complete overview of the key human occupation concepts as well as a range of perspectives through which occupational therapy and occupational science can be viewed and understood. Comprising 40 chapters, the book is divided into five sections: Section 1 Overview of Human Occupation, introducing the occupational therapy field and its conceptual landscape, including different models of therapeutic practice and practice reasoning; Section 2 Contemporary Perspectives on Human Occupation, including critical perspectives on disability and race and the philosophical foundations of occupational science; Section 3 Principal Concepts, explaining the conceptual language of human occupation across key person, social, psychological, physical performance, and environmental issues; Section 4 Human Occupation across the Lifespan and Life Course, covering human occupation from infancy to later adulthood; and Section 5 Domains/Types of Human Occupation, from sleep to play, sexuality to social participation, and education to work. Uniquely international in scope, each chapter in this edited book includes learning objectives, key terms, summary, dot points, review questions, and a list of additional online resources for readers to refer to. This is a complete resource for anyone beginning an occupational therapy course, clinicians seeking an accessible reference work to support their practice, or occupational scientists needing to refer to contemporary occupation-related concepts.

Exposure to Artificial Intelligence and Occupational Mobility: A Cross-Country Analysis Mauro Cazzaniga, Carlo Pizzinelli, Emma J Rockall, Ms. Marina Mendes Tavares, 2024-06-07 We document historical patterns of workers' transitions across occupations and over the life cycle for different levels of exposure and complementarity to Artificial Intelligence (AI) in Brazil and the UK. In both countries, college-educated workers frequently move from high exposure/low complementarity occupations (those more likely to be negatively affected by AI) to high exposure/high complementarity ones (those more likely to be positively affected by AI). This transition is especially common for young college-educated workers and is associated with an increase in average salaries. Young highly educated workers thus represent the demographic group for which AI-driven structural change could most expand opportunities for career progression but also highly disrupt entry into the labor market by removing stepping stone jobs. These patterns of upward labor market transitions for college-educated workers look broadly alike in the UK and Brazil, suggesting that the impact of AI adoption on the highly educated labor force could be similar across advanced economies and emerging markets. Meanwhile, non-college workers in Brazil face markedly higher chances of moving from better paid high exposure and low complementarity occupations to low exposure ones, suggesting a higher risk of income loss if AI were to reduce labor demand for the former type of jobs.
