Geocomputation with R Robin Lovelace, Jakub Nowosad, Jannes Muenchow, 2019-03-22 Geocomputation with R is for people who want to analyze visualize and model geographic data with open source software It is based on R a statistical programming language that has powerful data processing visualization and geospatial capabilities The book equips you with the knowledge and skills to tackle a wide range of issues manifested in geographic data including those with scientific societal and environmental implications This book will interest people from many backgrounds especially Geographic Information Systems GIS users interested in applying their domain specific knowledge in a powerful open source language for data science and R users interested in extending their skills to handle spatial data The book is divided into three parts I Foundations aimed at getting you up to speed with geographic data in R II extensions which covers advanced techniques and III applications to real world problems The chapters cover progressively more advanced topics with early chapters providing strong foundations on which the later chapters build Part I describes the nature of spatial datasets in R and methods for manipulating them It also covers geographic data import export and transforming coordinate reference systems Part II represents methods that build on these

foundations It covers advanced map making including web mapping bridges to GIS sharing reproducible code and how to do cross validation in the presence of spatial autocorrelation Part III applies the knowledge gained to tackle real world problems including representing and modeling transport systems finding optimal locations for stores or services and ecological modeling Exercises at the end of each chapter give you the skills needed to tackle a range of geospatial problems Solutions for each chapter and supplementary materials providing extended examples are available at <https://geocompr.github.io/geocompr/articles/> Dr Robin Lovelace is a University Academic Fellow at the University of Leeds where he has taught R for geographic research over many years with a focus on transport systems Dr Jakub Nowosad is an Assistant Professor in the Department of Geoinformation at the Adam Mickiewicz University in Poznan where his focus is on the analysis of large datasets to understand environmental processes Dr Jannes Muenchow is a Postdoctoral Researcher in the GIScience Department at the University of Jena where he develops and teaches a range of geographic methods with a focus on ecological modeling statistical geocomputing and predictive mapping All three are active developers and work on a number of R packages including stplanr sabre and RQGIS

New Progress of Nutritional Immunity on Aquatic Animals by Functional Feed Additives under the Condition of Low Fish Meal Hongyu Liu,Samad Rahimnejad,Qun Zhao,2025-06-18

Fish meal constitutes a relatively high proportion of aquaculture feed nowadays while too much reliance on this kind of classic protein source brings high costs and will restrain the development of other available energy providing ingredients Lipids and carbohydrates are widely acknowledged as great alternatives to fishmeal for their friendly prices and good ability to provide consumable energy To counteract the negative effects of excess dietary lipids and carbohydrates specific additives can be introduced into aquatic feed for taking advantage of their benefits for health and immunity Green functional additives can be a better alternative to antibiotics and have been commonly used in aquatic animal feeds How to improve the utilization of feed resources and ensure feed safety is the focus of research in aquatic animal nutrition In order to improve feed safety and aquatic product quality and safety the development and application of green non polluting functional additives is particularly important However research on functional additives is still at an early stage and their deeper mechanisms of influence on aquatic animals need to be further explored Feed quality and composition is a key factor in determining fish health It has been shown that fish growth serum immunity gut development flora structure immune response and signal transduction are all closely related to feed quality Fish consuming low fishmeal feeds often exhibit reduced growth and disease resistance processes that require corresponding changes in metabolic systems and immune response functions This can be mitigated by supplementing feed with functional additives Although a number of functional additives have been shown to have a positive impact on aquatic animal growth research into the specific mechanisms and targets that regulate the physiological state and immune response system of aquatic animals is still at the

exploratory stage Currently functional additives have been shown to interact with the intestinal flora At the same time during the digestion of functional additives in the aquatic animal intestine their key components can also cause a series of metabolic processes and immune response changes in aquatic animals Therefore the specific processes of absorption and metabolism of functional additives as well as the mechanisms affecting aquatic animals need to be studied Currently more comprehensive and advanced experimental tools and methods including cell signaling correlation analysis multi omics metabolic mechanisms and immune response analysis are needed to enrich and elucidate the feasibility and prospects of the application of green functional additives in aquafeeds The purpose of this Research Topic is to evaluate the influence of such functional feed additives on growth nutritional and immunity parameters in marine aquatic animals especially under the condition of low fish meal We aim to study the effect of functional feed additives on the nutritional immunity of marine aquatic animals especially under the condition of low fish meal Related studies in the format of Original Research Reviews and Mini Reviews are welcomed Development and application of new functional aquatic additives Immunological metabolic and intestinal health research affected by low fishmeal feeds and functional feed additives Establishing linkages between target organs e g hepatic intestinal axis brain intestinal axis based on low fishmeal feeds and functional feed additives Immunological regulation of aquatic animals by functional feed additives In vitro and in vivo experiments to validate the mechanisms of action and immune regulation of functional additives

Plant Iron Homeostasis Jeeyon Jeong, 2023-05-11 This detailed volume focuses on iron homeostasis in plants iron being an essential micronutrient that serves as a cofactor in numerous metabolic processes but is harmful in excess Specifically the content ranges from protocols to study the iron deficiency response the interaction between root and microbes under iron deficient conditions the transcriptional network of iron homeostasis systemic signaling of iron chloroplast iron regulation as well as methods on quantitative proteomics histochemical iron staining metal imaging using x ray fluorescence microscopy and more Written for the highly successful Methods in Molecular Biology series chapters include introductions to their respective topics lists of the necessary materials and reagents step by step and readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls Authoritative and practical Plant Iron Homeostasis Methods and Protocols serves as a valuable resource for the plant iron homeostasis research community and will be of broad interest to plant biologists soil scientists and molecular biologists
