

CHAPTER 2 OVERVIEW OF AUDITING

1. Review Questions

1. One definition of auditing is that it is a systematic process by which a competent, independent person objectively obtains and evaluates evidence regarding assertions about economic actions and events to ascertain the degree of correspondence between those assertions and established criteria, and communicating the results to interested users.

The Philippine Standards on Auditing (PSA) 120 "Framework of Philippine Standards on Auditing" states the objective of an audit as follows:

"The objective of an audit of financial statements is to enable the auditor to express an opinion whether the financial statements are prepared in all material respects, in accordance with an identified financial reporting framework."

2. This apparent paradox arises from the distinction between the function of auditing and the function of accounting.

The accounting function is the process of recording, classifying and summarizing economic events to provide relevant information to decision makers.

The rules of accounting are the criteria used by the auditor for evaluating the presentation of economic events for financial statements and he or she must therefore have an understanding of generally accepted accounting principles (GAAP), as well as generally accepted auditing standards (GAAS).

The accountant need not, and frequently does not, understand what auditors do, unless he or she is involved in doing audits, or has been trained as an auditor.
