A Place In Space Ethics Aesthetics And Watersheds:

A Place in Space Gary Snyder, 2008-06-28 A collection of twenty nine essays written over the past forty years **A Place in Space** Gary Snyder, 2008-06-28 In this classic collection of 29 pieces that span half a century Gary Snyder explores humans complex ever evolving attitudes toward the environment He argues that nature is not separate from humanity but intrinsic to it and that since societies are natural constructs it s imperative to go beyond racial ethnic and religious identities to find a shared concern for acts that benefit humans and nonhumans alike Included in the collection is his 1971 environmental manifesto *Four Changes* which as he writes in a postscript is unfortunately truer than ever In this new edition Snyder sends out a call to action that challenges all beings to take moral responsibility a call that resounds with readers discovering the book for the first time or those returning to an old favorite **A Sense of the Whole** Mark

Gonnerman, 2015-06-09 In 1997 Mark Gonnerman organized a yearlong research workshop on Gary Snyder s *Mountains and Rivers Without End* at the Stanford Humanities Center Members of what came to be known among faculty students and diverse community members as the *Mountains Rivers Workshop* met regularly to read and discuss Snyder s epic poem Here the poem served as a commons that turned the multiversity into a university once again if only for a moment The Workshop invited writers teachers and scholars from Northern California and Japan to speak on various aspects of Snyder s great accomplishment This book captures the excitement of these gatherings and invites readers to enter the poem through essays and talks by David Abram Wendell Berry Carl Bielefeldt Tim Dean Jim Dodge Robert Hass Stephanie Kaza Julia Martin Michael McClure Nanao Sakaki and Katsunori Yamazato It includes an interview with Gary Snyder appendices and other resources for further study Snyder once introduced a reading of this work with reference to whitewater rapids saying most of his writing is like a Class III run where you will do just fine on your own but that *Mountains and Rivers* is more like Class V if you re going to make it to take out you need a guide As a collection of commentaries and background readings this companion volume enhances each reader s ability to find their way into and through an adventurous and engaging work of art **Space and Place: Diversity in Reality, Imagination, and Representation** Brooke L. Restoration of Degraded Rivers: Challenges, Issues and Experiences D.P. Loucks, 2013-04-17 In the continued quest for increased economic benefits from our water resources numerous structures and operating policies for controlling the river flow have been built and implemented These structures and associated operating policies can facilitate navigation they can provide greater quantities of reliable water supplies to meet agricultural industrial and municipal water demands they can generate hydroelectric power and energy and they can provide increased flood protection recreation and other

benefits Over the past half century we have converted many of our rivers into engineered waterways These straightened often periodically dredged engineered rivers are complete with dikes reservoirs weirs and diversion canals All this engineering has enhanced economic development However as rivers and their floodplains become stressed from the excessive use and misuse of their resources their contribution to economic development can be threatened Evidence of economic and ecological degradation especially in relatively large river systems such as the Danube the Mississippi the Rhine and the Volga has increased our appreciation of beneficial roles natural aquatic and terrestrial ecosystems play in water quantity and quality management We have recognized the need to pay more attention to letting nature help us regulate water quantity and quality rather than working against nature and its variabilities and uncertainties Today there are efforts underway in many developed river basins to de engineer or return these straightened and controlled rivers to a more natural state
