Innovations in Agent-Based Complex Automated Negotiations Takayuki Ito, Minjie Zhang, Valentin Robu, Shaheen Fatima, Tokuro Matsuo, Hirofumi Yamaki, 2010-10-14 Complex Automated Negotiations have been widely studied and are becoming an important emerging area in the field of Autonomous Agents and Multi Agent Systems In general automated negotiations can be complex since there are a lot of factors that characterize such negotiations These factors include the number of issues dependency between issues representation of utility negotiation protocol negotiation form bilateral or multi party time constraints etc Software agents can support automation or simulation of such complex

negotiations on the behalf of their owners and can provide them with adequate bargaining strategies In many multi issue bargaining settings negotiation becomes more than a zero sum game so bargaining agents have an incentive to cooperate in order to achieve efficient win win agreements Also in a complex negotiation there could be multiple issues that are interdependent Thus agent s utility will become more complex than simple utility functions Further negotiation forms and protocols could be different between bilateral situations and multi party situations To realize such a complex automated negotiation we have to incorporate advanced Artificial Intelligence technologies includes search CSP graphical utility models Bays nets auctions utility graphs predicting and learning methods Applications could include e commerce tools decision making support tools negotiation support tools collaboration tools etc In this book we solicit papers on all aspects of such complex automated negotiations in the field of Autonomous Agents and Multi Agent Systems In addition this book includes papers on the ANAC 2010 Automated Negotiating Agents Competition in which automated agents who have different negotiation strategies and implemented by different developers are automatically negotiate in the several negotiation domains ANAC is one of real testbeds in which strategies for automated negotiating agents are evaluated in a tournament style

Advances in Practical Multi-Agent Systems Quan Bai,Naoki Fukuta,2010-10-14 Multi Agent System MAS is an exciting emerging paradigm expected to play a key role in many society changing practices The International Conference on Principles and Practice of Multi Agent Systems PRIMA is a leading scientific conference for research on intelligent agent systems and multi agent systems attracting high quality state of the art research from all over the world PRIMA 09 was the 12th in the series of PRIMA conferences and was held in Nagoya Japan Beside a single track main conference PRIMA 09 also included a number of workshops which were designed to provide a forum for researchers and practitioners to present and exchange the latest developments at the MAS frontier This book constitutes the post proceedings of workshops under PRIMA 09 Readers will be able to explore a diverse range of topics and detailed discussions related to a number of important themes in our ever changing world This collection plays an important role in bridging the gap between MAS theory and practice It emphasizes the importance of MAS in the research and development of smart power grid systems decision support systems optimization and analysis systems for road traffic and markets environmental monitoring and simulation and in many other real world applications and publicizes and extends MAS technology to many domains in this fast moving information age

Information Retrieval and Mining in Distributed Environments Alessandro Soro,Eloisa Vargiu,Giuliano Armano,Gavino Paddeu,2010-10-08 At DART 09 held in conjunction with the 2009 IEEE WIC ACM International Conference on Web Intelligence WI 2009 and Intelligent Agent Technology IAT 2009 in Milan Italy practitioners and researchers working on pervasive and intelligent access to web services and distributed information retrieval met to compare their work ad insights in such fascinating topics Extended and revised versions of their papers together with selected and invited original contributions are collected in this book Topics covered are those that emerged at DART 09 as the most intriguing and

challenging i community oriented tools and techniques as infrastructure of the Web 2.0 ii agent technology applied to virtual world scenarios iii context aware information retrieval iv content based information retrieval and v industrial applications of information retrieval Every chapter before discussing in depth the specific topic presents a comprehensive review of related work and state of the art in the hope of this volume to be of use in the years to come to both researchers and students
