GNSS Environmental Sensing Joseph Awange,2017-09-04 This book is the second edition of *Environmental Monitoring using GNSS* and highlights the latest developments in global navigation satellite systems GNSS It features a completely new title and additional chapters that present emerging challenges to environmental monitoring climate variability change and food insecurity Since the publication of the first edition much has changed in both the development and applications of GNSS a satellite microwave remote sensing technique It is the first tool to span all four dimensions of relevance to humans position navigation timing and the environment and it has widely been used for positioning both by military and civilians navigation and timing Its increasing use is leading to a new era of remote sensing that is now revolutionizing the art of monitoring our environment in ways never imagined before On the one hand nearly all GNSS satellites Global Positioning System GPS Global Navigation Satellite System GLONASS Galileo and Beidou have become operational thereby providing high precision continuous all weather and near real time remote sensing multi signals

beneficial to environmental monitoring On the other hand the emerging challenges of precisely monitoring climate change and the demand for the production of sufficient food for ever increasing populations are pushing traditional monitoring methods to their limits In this regard refracted GNSS signals i e occulted GNSS signals or GNSS meteorology are now emerging as sensors of climate variability while the reflected signals GNSS reflectometry or GNSS R are increasingly finding applications in determining e g soil moisture content ice and snow thickness ocean heights and wind speed and direction among others Furthermore the increasing recognition and application of GNSS supported unmanned aircraft vehicles UAV drones in agriculture e g through the determination of water holding capacity of soil highlights the new challenges facing GNSS As such this new edition three new chapters address GNSS reflectometry and applications GNSS sensing of climate variability and the applications in UAV drones Moreover it explores the application of GNSS to support integrated coastal zone management

, *Engineering Geology for Society and Territory - Volume 5* Giorgio Lollino,Andrea Manconi,Fausto Guzzetti,Martin Culshaw,Peter Bobrowsky,Fabio Luino,2014-08-25 This book is one out of 8 IAEG XII Congress volumes and deals with the theme of urban geology Along with a rapidly growing world population the wave of urban growth continues causing cities to swell and new metropolitan centers to emerge These global trends also open new ventures for underground city development Engineering geology plays a major role in facing the increasing issues of the urban environment such as finding aggregates for construction works providing adequate water supply and waste management solving building problems associated to geological and geomorphological conditions evaluating host rock conditions for underground constructions preventing or mitigating geological and seismic hazards Furthermore this book illustrates recent advancements in sustainable land use planning which includes conservation protection reclamation and landscape impact of open pit mining and alternative power generation The Engineering Geology for Society and Territory volumes of the IAEG XII Congress held in Torino from September 15 19 2014 analyze the dynamic role of engineering geology in our changing world and build on the four main themes of the congress environment processes issues and approaches The congress topics and subject areas of the 8 IAEG XII Congress volumes are 1 Climate Change and Engineering Geology 2 Landslide Processes River Basins 3 Reservoir Sedimentation and Water Resources 4 Marine and Coastal Processes Urban Geology 5 Sustainable Planning and Landscape Exploitation 6 Applied Geology for Major Engineering Projects 7 Education Professional Ethics and Public Recognition of Engineering Geology 8 Preservation of Cultural Heritage

Environmental Geoinformatics Joseph Awange,John Kiema,2018-12-08 This second edition includes updated chapters from the first edition as well as five additional new chapters Light detection and ranging LiDAR CORONA historical de classified products Unmanned Aircraft Vehicles UAVs GNSS reflectometry and GNSS applications to climate variability shifting the main focus from monitoring and management to extreme hydro climatic and food security challenges and exploiting big data Since the publication of first edition much has changed in terms of technology and the demand for geospatial data has increased with the advent of the

big data era For instance the use of laser scanning has advanced so much that it is unavoidable in most environmental monitoring tasks whereas unmanned aircraft vehicles UAVs drones are emerging as efficient tools that address food security issues as well as many other contemporary challenges Furthermore global navigation satellite systems GNSS are now responding to challenges posed by climate change by unravelling the impacts of teleconnection e g ENSO as well as advancing the use of reflected signals GNSS reflectometry to monitor e g soil moisture variations Indeed all these rely on the explosive use of big data in many fields of human endeavour Moreover with the ever increasing global population intense pressure is being exerted on the Earth s resources leading to significant changes in its land cover e g deforestation diminishing biodiversity and natural habitats dwindling fresh water supplies and changing weather and climatic patterns e g global warming changing sea level Environmental monitoring techniques that provide information on these are under scrutiny from an increasingly environmentally conscious society that demands the efficient delivery of such information at a minimal cost Environmental changes vary both spatially and temporally thereby putting pressure on traditional methods of data acquisition some of which are highly labour intensive such as animal tracking for conservation purposes With these challenges conventional monitoring techniques particularly those that record spatial changes call for more sophisticated approaches that deliver the necessary information at an affordable cost One direction being pursued in the development of such techniques involves environmental geoinformatics which can act as a stand alone method or complement traditional methods

Applications of Space Techniques on the Natural Hazards in the MENA Region Mashael M. Al Saud, 2022-04-29 This book introduces a comprehensive understanding in the use of space techniques in natural hazards and risk management in the MENA Region The book is based on different case studies from 25 MENA countries and will be useful in highlighting the issues from all aspects In recent years the number of natural hazard events has increased in the MENA Region This is exacerbated by the changing climate and extreme climate events as well as a large increase in the population in this area Disastrous events occur on a yearly basis characterized by a vulnerability of physical processes Floods earthquakes and mass movement result in severe damage to property and livelihoods and have devastating effects upon the environment These events cause severe financial losses which on an annual basis can exceed millions of dollars The predication assessment and monitoring approaches remain inadequate in managing these hazards and in mitigating their impacts but with the development of space techniques and geo information systems these situations can now be better managed The miscellany of satellite images with different spatial and temporal resolutions enable the detection of terrain features and provide indications of potential natural risks This book will of interest to stakeholders including field experts academics researchers and decision makers
