The Physics of Laser Plasmas and Applications - Volume 1 Hideaki Takabe, 2020-08-28 The series of books discusses the physics of laser and matter interaction fluid dynamics of high temperature and high density compressible plasma and kinetic phenomena and particle dynamics in laser produced plasma The book Vol 1 gives the physics of intense laser absorption in matter and or plasma in non relativistic and relativistic laser intensity regime In many cases it is explained with clear images of physics so that an intuitive understanding of individual physics is possible for non specialists For intense laser of 10^{13} to 10^{16} W cm² the laser energy is mainly absorbed via collisional process where the oscillation energy is converted to thermal energy by non adiabatic Coulomb collision with the ions Collisionless interactions with the collective modes in plasma are also described The main topics are the interaction of ultra intense laser and plasma for the intensity near and over 10^{18} W cm² In such regime relativistic dynamics become essential A new physics appears due to the relativistic effects such as mass correction relativistic nonlinear force chaos physics of particle motions and so on The book provides clearly the theoretical base for challenging the laser plasma interaction physics in the wide range of power lasers It is suitable as a textbook for upper undergraduate and graduate students as well as for readers who want to understand the whole physics structure about what happen when an intense laser irradiates any materials including solids gas etc Explaining the physics intuitively without complicated mathematics it is also a valuable resource for engineering students and researchers as well as for self study

The Interaction of High-Power Lasers with Plasmas Shalom Eliezer, 2002-08-16 The Interaction of High Power Lasers with Plasmas provides a thorough self contained discussion of the physical processes occurring in laser plasma interactions including a detailed review of the relevant plasma and laser physics The book analyzes laser absorption and propagation electron transport and the relevant plasma waves in detail It al
