Adaptive Representations

for Reinforcement Learning Simon Whiteson,2010-10-05 This book presents new algorithms for reinforcement learning a form of machine learning in which an autonomous agent seeks a control policy for a sequential decision task Since current methods typically rely on manually designed solution representations agents that automatically adapt their own representations have the potential to dramatically improve performance This book introduces two novel approaches for automatically discovering high performing representations The first approach synthesizes temporal difference methods the traditional approach to reinforcement learning with evolutionary methods which can learn representations for a broad class of optimization problems This synthesis is accomplished by customizing evolutionary methods to the on line nature of

reinforcement learning and using them to evolve representations for value function approximators The second approach automatically learns representations based on piecewise constant approximations of value functions It begins with coarse representations and gradually refines them during learning analyzing the current policy and value function to deduce the best refinements This book also introduces a novel method for devising input representations This method addresses the feature selection problem by extending an algorithm that evolves the topology and weights of neural networks such that it evolves their inputs too In addition to introducing these new methods this book presents extensive empirical results in multiple domains demonstrating that these techniques can substantially improve performance over methods with manual representations

Advanced Information Networking and Applications Leonard Barolli, Isaac Woungang, Tomoya Enokido, 2021-04-30 This book covers the theory design and applications of computer networks distributed computing and information systems Networks of today are going through a rapid evolution and there are many emerging areas of information networking and their applications Heterogeneous networking supported by recent technological advances in low power wireless communications along with silicon integration of various functionalities such as sensing communications intelligence and actuations is emerging as a critically important disruptive computer class based on a new platform networking structure and interface that enable novel low cost and high volume applications Several of such applications have been difficult to realize because of many interconnections problems To fulfill their large range of applications different kinds of networks need to collaborate and wired and next generation wireless systems should be integrated in order to develop high performance computing solutions to problems arising from the complexities of these networks The aim of the book *Advanced Information Networking and Applications* is to provide latest research findings innovative research results methods and development techniques from both theoretical and practical perspectives related to the emerging areas of information networking and applications

Video Search and Mining Dan Schonfeld, Caifeng Shan, Dacheng Tao, Liang Wang, 2010-04-20 As cameras become more pervasive in our daily life vast amounts of video data are generated The popularity of YouTube and similar websites such as Tudou and Youku provides strong evidence for the increasing role of video in society One of the main challenges confronting us in the era of information technology is to fectively rely on the huge and rapidly growing video data accumulating in large multimedia archives Innovative video processing and analysis techniques will play an increasingly important role in resolving the difficult task of video search and retrieval A wide range of video based applications have benefited from vances in video search and mining including multimedia information mana ment human computer interaction security and surveillance copyright prot tion and personal entertainment to name a few This book provides an overview of emerging new approaches to video search and mining based on promising methods being developed in the computer vision and image analysis community Video search and mining is a rapidly evolving discipline whose aim is to capture interesting patterns in video data It has become one of the core areas in the data mining research community In comparison to other

types of data mining e.g. text video mining is still in its infancy. Many challenging research problems are facing video mining researchers.

Learning and Intelligent Optimization Giuseppe Nicosia, Panos Pardalos, 2013-11-26 This book constitutes the proceedings of the 7th International Conference on Learning and Optimization LION 7 which was held in Catania, Italy, in January 2013. The 49 contributions presented in this volume were carefully reviewed and selected from 101 submissions. They explore the intersections and uncharted territories between machine learning, artificial intelligence, mathematical programming and algorithms for hard optimization problems.

Mining and Analyzing Social Networks I-Hsien Ting, Hui-Ju Wu, Tien-Hwa Ho, 2010-05-16 Mining social networks has now become a very popular research area, not only for data mining and web mining but also for social network analysis. Data mining is a technique that has the ability to process and analyze large amounts of data and by this to discover valuable information from the data. In recent years, due to the growth of social communications and social networking websites, data mining becomes a very important and powerful technique to process and analyze such large amount of data. Thus, this book will focus upon Mining and Analyzing social network. Some chapters in this book are extended from the papers that presented in MSNDS2009, the First International Workshop on Mining Social Networks for Decision Support and SNMABA2009, The International Workshop on Social Networks Mining and Analysis for Business Applications. In addition, we also sent invitations to researchers that are famous in this research area to contribute for this book. The chapters of this book are introduced as follows: In chapter 1, Graph Model for Pattern Recognition in Text, Qin Wu et al. present a novel approach that uses a weighted directed multigraph for text pattern recognition. In the proposed methodology, a weighted directed multigraph model has been set up by using the distances between the keywords as the weights of arcs, as well, a keyword frequency distance based algorithm has also been introduced. Case studies are also included in this chapter to show the performance is better than traditional means.
